Title of proposal	2020/8708 - Urannah Dam and Pipelines Project

Section 1

Summary of your proposed action

1.1 Project industry type	Water Management and Use

1.2 Provide a detailed description of the proposed action, including all proposed activities

The Urannah Dam and Pipelines Project (the project) comprises the proposed construction and operation of a new dam on the Broken River at Urannah in Central Queensland, with additional components that include a water distribution network, comprising connecting water pipelines and instream distribution and storage of water. The project components, together with supporting ancillary infrastructure and associated works, are as follows:

— Urannah Dam – a new gravity fed dam at Urannah storing up to 1,500,000 ML of water

— Water distribution (pipeline) networks from Urannah Dam north to Peter Faust Dam and on to Bowen and Abbot Point, south to Eungella Dam and Moranbah, and in-stream flow within the Broken River and Bowen River, together with associated ancillary works, such as pump stations and power supply infrastructure

— Ancillary works and infrastructure to support the development of the Urannah Dam and Pipelines Project, for example, quarries and borrows, road and access development and upgrades, site establishment areas, laydowns, site amenities and accommodation, services and utilities (including electricity, telecommunications).

The locality of these key project components are shown in Figure 1 (Attachment A).

1.2.1 Urannah Dam

Urannah Dam is proposed to be constructed on the Broken River at Urannah in Central Queensland. The dam is proposed to have a full supply level (FSL) at RL 290 m Australian height datum (AHD) and a full supply volume of 1,500,000 ML, with an annual yield of 150,000 ML. The associated storage area will inundate an estimated 10,500 ha.

Dam crest length is expected to be in the order of 700 m and 7 m in width at an elevation of up to 301 m AHD. The dam height is expected to be in the order of 80 m from the river bed (RL 218 m) to the maximum non-overflow section. The spillway will comprise a crest (up to 300 m long) and concrete channels or shutes together with dissipating infrastructure (plunge pools, stilling basins, etc.) to reduce the energy flow. Outlets will be required to facilitate flows downstream to meet environmental flow requirements as well as water supply demand. A multi-level intake tower will be used to selectively draw water from the reservoir storage.

Fish passage infrastructure considered feasible for Urannah Dam include:

— Fish lock

— Fully manual system (trap and haul).

1.2.2 Water distribution network

The proposed water distribution network encompasses four main components. These include:

— A northern distribution pipeline to Peter Faust Dam, approximately 67 km in length and with a capacity to supply 20,000 ML/annum to industrial, urban and agricultural users to the north, within the surrounding Proserpine area

— A southern distribution pipeline network connecting Eungella Dam (with a capacity to supply 20,000 ML/annum to primarily industrial users within the surrounding Eungella area) and extending south approximately 150 km to Moranbah (with a capacity to supply 20,000 ML/annum to industrial users).

— Instream distribution which follows the natural course of the river and supplies 90,000 ML/ annum to primarily mining customers at Collinsville and Newlands, and to supply a proposed irrigation precinct (Collinsville Irrigation Scheme) along the Bowen River.

The instream distribution network would involve instream delivery from Urannah Dam to Bowen Weir via the Broken and Bowen Rivers. New pump sets would be required to lift water from the Bowen Weir pool to piped distribution networks on the right and left banks. The existing Gattonvale Offstream Storage (GOSS) and associated pumps would be used to service the left bank wherever possible. Works would involve:

— River pump stations on both sides of the river banks at Bowen Weir

— Sourcing electricity to the site

— Adding an outlet structure to the existing GOSS.

The precise location of water distribution pipelines is yet to be determined following additional studies which will seek to optimise suitable northern and southern alignments in consideration of environmental and social values, including landholdings, together with technical feasibility and engineering design considerations and cost efficiencies. At the current time nominal investigation corridors have been proposed to define the action area and will be the subject of further studies.

1.3 What is the extent and location of your proposed action?

See Appendix B

1.5 Provide a brief physical description of the property on which the proposed action will take place and the location of the proposed action (e.g. proximity to major towns, or for off-shore actions, shortest distance to mainland)

The proposed Urannah Dam is located in within the Mackay Regional Council local government area (LGA). The northern

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

water pipeline traverses both the Mackay and Whitsunday Regional Council LGAs. The southern water pipeline sits largely within the Isaac Regional Council LGA. Land uses predominantly comprise grazing land, with mining activities prevalent across the southern pipeline alignment.

The main service facility in the area is the town of Collinsville approximately 70 km north-west of the dam, with Mackay located approximately 80 km away on the coast, west of the proposed dam. The northern pipeline investigation corridor traverses variable topography including ranges and low lying hills through rural and remote land areas not within proximity to any settlements. The southern pipeline investigation corridor traverses low lying hillslopes at the start before reaching lower lying plains west of Nebo and through to Moranbah township.

1.6 What is the size of the proposed action area development footprint (or work area) including disturbance footprint and avoidance footprint (if relevant)?

The disturbance footprint for each component of the project has been estimated to be in the order of:

- Urannah Dam and storage reservoir - 10,500 ha
- Water distribution network (estimated 60 m right of way) - 1,500 ha comprising:
  - 67 km of pipeline to the north
  - 170 km of pipeline south.
- Ancillary works (to be determined).

These areas are subject to change as a result of changes to the project design, avoidance of sensitive environmental areas, landholder and stakeholder considerations, demand predictions and so on and will be confirmed as part of the environmental impact assessment.

1.7 Proposed action location

Lot - A list of lot on plans is provided in Attachment B Tenure.

1.8 Primary jurisdiction Queensland

1.9 Has the person proposing to take the action received any Australian Government grant funding to undertake this project?

☑ Yes ☐ No

1.9.1 Provide detail

Urannah Dam was first formally proposed by government through the Queensland Irrigation and Water Supply Commission in the 1960s. Non-profit economic development agency, Bowen Collinsville Enterprise Group Inc. (BCE), has been driving investigations since the 1990s. In 2016, the Australian Government committed $3 million of National Water Infrastructure Development Fund (NWIDF) funding for a 'detailed examination of the economic feasibility of Urannah Dam' as part of a broader suite of 39 feasibility studies for new water infrastructure across Australia. BCE was selected to undertake a three-stage study. BCE has sub-contracted with Urannah Water Scheme Pty Ltd (UWS), a subsidiary of Bowen River Utilities Pty Ltd, to undertake the study. The preliminary business case (PBC) was completed in late 2019.

In 2019, an additional $10 million in funding through the NWIDF was secured for the development of a detailed business case (DBC) and Environmental Impact Statement (EIS) for a proposed dam and water distribution network and master planned irrigation precinct. The Urannah Dam and Pipelines Project is the co-receipt of the funds together with the proposed Collinsville Irrigation Scheme Project as proposed by Collinsville Irrigation Scheme Pty Ltd.

1.10 Is the proposed action subject to local government planning approval?

☑ Yes ☐ No

1.10.1 Is there a local government area and council contact for the proposal?

☐ Yes ☑ No

1.11 Provide an estimated start and estimated end date for the proposed action

Start Date	01/04/2022
End Date	01/04/2026

1.12 Provide details of the context, planning framework and state and/or local Government requirements

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

The Urannah Dam and Pipelines Project together with the proposed Collinsville Irrigation Scheme and Bowen Renewable Energy Hub Pumped Hydro-electric Scheme (PHES) was declared a 'coordinated project' under section 26 of the State Development and Public Works Organisation Act 1971 (Qld) on 7th May 2020. An Initial Advice Statement (IAS) was prepared to provide information, as required under section 27AB of the SDPWO Act, to inform the Coordinator-General in the decision making process on the basis that the project is characterised by:

— Complex approval requirements, including Commonwealth government, state government and local government area involvement
— Strategic significance to the region and state, including water security and related infrastructure, economic and social benefits, and capital investment
— Potential significant environmental effects on matters of national environmental significance (MNES), including threatened species and threatened ecological communities and migratory species
— Potential significant environmental effects on matters of state environmental significance (MSES), including regulated vegetation, connectivity, wetlands and watercourses, protected wildlife habitat.

Assessment through an EIS is required to quantify level of impact on relevant environmental values, propose avoidance and mitigation measures for each project, and where avoidance is not possible propose appropriate offsets.

There are a number of planning instruments and government policies applicable to the project, including:

— Queensland's State Planning Policy
— North Queensland Regional Plan
— Mackay, Isaac, Whitsunday Regional Plan
— Burdekin Region Water Quality Improvement Plan 2016
— Local government area planning schemes
— Relevant state codes under the State Development Assessment Provisions:
– State Code 10: Taking or Interfering with Water
– State Code 15: Removal of Quarry Material from a Watercourse or Lake
– State Code 16: Native Vegetation Clearing
– State Code 18: Constructing or Raising Waterway Barrier Works in Fish Habitats
– State Code 20: Referable Dams
– State Code 22: Environmentally Relevant Activities.
— Australian and Queensland Reef 2050 Long-Term Sustainability Plan
— Northern Australia Infrastructure Facility
— Our North, Our Future: White Paper
— Australian Infrastructure Plan
— State Infrastructure Plan
— Queensland Bulk Water Opportunities Statement
— Queensland's Agricultural Strategy
— Queensland Climate Transition Strategy.

The project is generally consistent with the outcomes, strategies and policies of the above mentioned planning instruments. Further assessment will be undertaken as part of the EIS process.

The key legislative instruments relevant to an assessment of water requirements for the project are:

— Water Act 2007 (Commonwealth)
— Water Act 2000 (Queensland) and subordinate legislation the Water Regulation 2016 (Queensland), the Water Plan (Burdekin) 2007 and the Burdekin Basin Water Management Protocol 2016
— Water Supply (Safety and Reliability) Act 2008
— Environment Protection Act 1994 and the Environment Protection (Water) Policy 2009.

Under the Water Plan (Burdekin) 2007, the targeted water will be required to be allocated by the State for use by the project by way of:

— A resource operations licence (ROL) which authorises the construction and operation of infrastructure, and the distribution of water; and
— One or more water allocations.

Applying for the ROL will occur prior to, or concurrently with, applying for the water allocations for the targeted water. The preparation of the application for the amendment to the Burdekin Water Plan, ROL and Water Allocations will occur in parallel with the EIS process, and in consultation with DNRME.

The potential approvals under state and local government legislation are detailed in Attachment C Approval requirements and include, amongst others:

— Material change of use of premises (change in land use) and Operational Work for reconfiguration of a lot (inundation area and irrigation area) assessable under a local government planning scheme
— Operational works for a referable dam
— Operational works for construction of a waterway barrier work
— Operational works for taking or interfering with water in a watercourse or a dam constructed on a watercourse
— Operational works for removing quarry material from a watercourse
— Operational works for clearing native vegetation

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

— Material change of use for an environmentally relevant activity.

1.13 Describe any public consultation that has been, is being or will be undertaken, including with Indigenous stakeholders

Community and stakeholder consultation has been targeted and conducted at a regional level as part of the feasibility studies for the project. The focus of stakeholder engagement, to date, has been on water infrastructure and potential customers of a large-scale water solution.

Consultation with the following stakeholders has been undertaken as part of the PBC:

— Coal miners, including:
– Rio Tinto
– Glencore
– QCoal
– New Hope
– BMA
– Peabody
– Anglo American
– Stanmore
– Fitzroy Resources
— Indigenous leaseholders, Urannah Property Association
— Agriculturists and irrigators
— Large scale contractors
— Financiers
— Sunwater
— Government departments in Brisbane and other regions.

Consultation was aligned with the Queensland Government's Project Assessment Framework guidelines and focused on water infrastructure and potential customers of a large-scale water solution. There was strong support for improving water security through long-term and large-scale solutions to support diversifying the economy.

Since the engagement during the PBC, additional consultation has occurred with:

- Coal miners
- Landholders, including with regard to access and acquisition
- Traditional owners, including Native Title claimants (specifically the Widi People of the Nebo Estate, Birriah People and Barada Barna People)
- Sunwater and Powerlink
- Bowen Chamber of Commerce
- North Queensland Gas Pipeline (AGL)
- Indigenous Land Corp
- Applicable local, state and federal government departments, government owned corporations and agencies.

Two virtual public consultation sessions have taken place and four more are scheduled over the coming months. The sessions have been widely advertised in the community and sixty local residents have participated in the two sessions. As COVID-19 restrictions ease, it is expected that there will be a hybrid of virtual and in-person public consultation sessions.

Targeted community and stakeholder consultation is ongoing and will be undertaken as part of the EIS, incorporating engagement as part of the social impact assessment and development of cultural heritage management plans and/or agreements, in accordance with the requirements under State and Commonwealth legislation.

1.14 Describe any environmental impact assessments that have been or will be carried out under Commonwealth, State or Territory legislation including relevant impacts of the project

The Queensland Coordinator-General has declared the Urannah Dam and associated water distribution pipelines to be part of a 'coordinated project' requiring assessment by EIS.

On the basis of preliminary desktop reviews and assessments undertaken it is predicted that the project has potential to impact on MNES under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) and will require approval from the Commonwealth Minister for Environment.

As a controlled action it is considered likely that the Urannah Dam and Pipelines project will require assessment by EIS. Assessment of the project under the bilateral agreement with the State of Queensland is considered to provide a streamlined approach and alignment of Commonwealth and State interests for MNES and MSES, respectively.

1.15 Is this action part of a staged development (or a component of a larger project)?

☐ Yes ☑ No

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

1.16 Is the proposed action related to other actions or proposals in the region?

☑ Yes ☐ No

1.16.1 Identify the nature/scope and location of the related action (Including under the relevant legislation)

The Urannah Dam and Pipelines Project is related to the proposed Collinsville Irrigation Scheme and PHES projects being proposed by Collinsville Irrigation Scheme Pty Ltd and Blue Hydro Project Pty Ltd, respectively. The Queensland Coordinator-General has declared the proposed actions collectively as a coordinated project under the SDPWO Act and for which an EIS will be prepared. Separate EPBC Act Referrals are being prepared for the Collinsville Irrigation Scheme and the PHES.

The project locations are shown in Figure 2 (Attachment A).

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

Section 2

Matters of national environmental significance

2.1 Is the proposed action likely to have any direct or indirect impact on the values of any World Heritage properties?

☑ Yes ☐ No

Property

Great Barrier Reef World Heritage Area (GBRWHA)

Impact

Water supply from Urannah Dam is proposed to support the development of up 25,000 ha of high quality agricultural land within the proposed Collinsville Irrigation Precinct . The Collinsvile Irrigation Precinct is located approximately 40 km inland of the GBRWHA and has the potential to indirectly impact on the world heritage values of the area. Expansion of agricultural areas has the potential to impact on the environmental values of the Bowen River, locally, and the Burdekin River downstream, its coastal ecosystems and the GBRWHA. These impacts would arise predominantly from potential:

— Land clearing, and increased sediment, nutrient and pesticide discharge from agricultural activities
— Changes to the hydrological regime as a result of water extraction and land development

Through the expansion of agricultural activities indirect impacts, including increased pressure on wetlands to perform filtering ecosystem functions, may increase the risk of discharge increasing the levels of agri-pollutants to the GBRWHA.

Determination of the nature and scale of the impact will be subject to the outcomes of the environmental impact assessment, land suitability assessment, land holder negotiations, the cropping types and mixes proposed and the identification of appropriate land use and management practices , including erosion and soil protection management. An assessment of significance will be undertaken in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance as part of the EIS.

A separate EPBC Act Referral has been prepared for the proposed Collinsville Irrigation Precinct.

2.1.2 Do you consider this impact to be significant?

☐ Yes ☑ No

2.2 Is the proposed action likely to have any direct or indirect impact on the values of any National Heritage places?

☑ Yes ☐ No

Place

Great Barrier Reef (GBR)

Impact

Indirect impacts associated with the facilitated development of the proposed Collinsville Irrigation Precinct have the potential to indirectly impact on the universal values of the GBR. Potential impacts on the GBR are discussed in section 2.1.1.

An assessment of the project impacts on the National Heritage values of the GBR will be undertaken as part of the EIS for the project.

A separate EPBC Act Referral has been prepared for the proposed Collinsville Irrigation Precinct.

2.2.2 Do you consider this impact to be significant?

☐ Yes ☑ No

2.3 Is the proposed action likely to have any direct or indirect impact on the ecological character of a Ramsar wetland?

☐ Yes ☑ No

2.4 Is the proposed action likely to have any direct or indirect impact on the members of any listed species or any threatened ecological community, or their habitat?

☑ Yes ☐ No

Species or threatened ecological community

Brigalow (Acacia harpophylla dominant and codominant)

Impact

In Queensland, the Brigalow TEC includes areas that meet the descriptions of 16 REs. Desktop review has identified that

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

constituent RE 11.9.5, RE 11.4.9 and RE 11.9.1 are mapped (DNRME v11) for areas within the Moranbah pipeline investigation corridor (Attachment A Figure 3 MNES) such that the TEC is considered 'likely to occur'. The diagnostic characteristics and condition thresholds of these areas will be investigated as part of the EIS and the extent to which they are impacted determined based on the ability to avoid impacts through project design and/or minimise through the adoption of appropriate management actions.

Preliminary site walkovers indicate that areas are likely to be incorrectly mapped and where present exist in isolated, degraded (through weed infestation and grazing practices) and fragmented patches such that project impacts would not result in a significant impact on the TEC. A significance assessment in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance will be undertaken as part of the EIS.

The potential project impact on this species includes:

— Vegetation clearing and associated habitat fragmentation
— Changes to hydrological regime
— Dispersion of weeds and invasive species during construction
— Air, noise, vibration and dust pollution during construction.

Details of impacts and disturbance to this species will be informed by ecology surveys and assessment undertaken as part of the EIS.

Species or threatened ecological community

Poplar box grassy woodland on alluvial plains

Impact

In Queensland, the Poplar box grassy woodland on alluvial plains TEC includes areas that meet the descriptions of five REs. Desktop review has identified that RE 11.3.2 is mapped for sections of the Moranbah pipeline investigation corridor (Attachment A Figure 3 MNES). The diagnostic characteristics and condition thresholds of these areas will be investigated as part of the EIS and the extent to which they are impacted determined based on the ability to avoid impacts through project design and/or minimise through the adoption of appropriate management actions.

Preliminary site walkovers indicate that areas are likely to be incorrectly mapped and where present exist in isolated, degraded (through weed infestation and grazing practices) and fragmented patches such that project impacts would not result in a significant impact on the TEC. A significance assessment in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance will be undertaken as part of the EIS.

The potential project impact on this species includes:

— Vegetation clearing and associated habitat fragmentation
— Changes to hydrological regime
— Dispersion of weeds and invasive species during construction
— Air, noise, vibration and dust pollution during construction.

Details of impacts and disturbance to this species will be informed by ecology surveys and assessment undertaken as part of the EIS.

Species or threatened ecological community

Geophaps scripta scripta (squatter pigeon) (southern))

Impact

The species occurs in open-forests to sparse, open-woodlands and scrub that are dominated by Eucalyptus, Corymbia and Acacia or Callitris species, remnant and regrowth within 3 km of water (DAWE 2020). Sandy areas dissected by gravel ridges, which have open and short grass cover allowing easier movement, are preferred. They nest on the ground among or under vegetation. Squatter pigeon (southern) is historically recorded within the project area and confirmed from locations during a preliminary site walk over (Attachment A Figure 3 MNES).

The composition and condition of squatter pigeon habitat will be investigated as part of the EIS and the extent to which it is likely to be impacted determined based on the ability to avoid impacts through project design and/or minimise through the adoption of appropriate management actions. A significance assessment in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance will be undertaken as part of the EIS.

Notwithstanding assessment to be undertaken as part of an EIS, potential impacts include:

— Vegetation clearing (loss of habitat and associated habitat fragmentation
— Injury and mortality as a result of increased traffic and people movements within habitat areas
— Dispersion of weeds and invasive species leading to changes in abundance and availability of foraging habitat and restriction of ground-level movement
— Increased predation during through increased activity from pest animals such as dogs, foxes, cats and other predatory species due to artificial water sources and increased waste material presence
— Air, noise, vibration and dust pollution resulting disturbance and degradation of habitat.

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

Species or threatened ecological community

Dasyurus hallucatus (northern quoll)

Impact

The species occurs in a range of habitats, including open dry sclerophyll forest and woodland, riparian woodland, low dry vine thicket, the margins of notophyll vineforest, mangroves, sugarcane farms and in urban areas. They are most abundant in hilly or rocky areas close to permanent water. Northern quoll is historically recorded within the project area and confirmed from locations during a preliminary site surveillance (Attachment A Figure 3 MNES).

The composition and condition of northern quoll habitat will be investigated as part of the EIS and the extent to which it is likely to be impacted determined based on the ability to avoid impacts through project design and/or minimise through the adoption of appropriate management actions. A significance assessment in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance will be undertaken as part of the EIS.

Notwithstanding assessment to be undertaken as part of an EIS, potential impacts include:

— Vegetation clearing (loss of habitat) and associated habitat fragmentation
— Injury and mortality as a result of clearing, entanglement on fences and increased traffic and people movements within habitat areas
— Increased predation through increased activity from pest animals such as dogs, foxes, cats and other predatory species due to artificial water sources and increased waste presence.

Species or threatened ecological community

Phascolarctos cinereus (koala)

Impact

Within the region, koalas occur in sub-humid Eucalyptus dominated forests and woodlands in riparian and non-riparian environments, and some Acacia dominated forests and woodlands in non-riparian environments (DAWE 2020). A preliminary site walkover observed koala faecal pellets and scratches and foraging habitat was recorded in woodland habitats. The koala is historically recorded for the area and confirmed from locations during preliminary site surveillance.

The composition and condition of the habitat will be investigated as part of the EIS and the extent to which it is likely to be impacted determined based on the ability to avoid impacts through project design and/or minimise through the adoption of appropriate management actions. Much of the development area is subject to historic land clearing activities and is used for grazing, including within mining buffer areas. Large intact woodland areas are likely retained in riparian areas that would be retained. A significance of impact assessment in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance will be undertaken as part of the EIS. The potential project impact on this species includes:

— Vegetation clearing (loss of habitat) and associated habitat fragmentation
— Injury and mortality as a result of clearing, entanglement on fences and increased traffic and people movements within habitat areas
— Increased predation through increased activity from pest animals such as dogs, foxes, cats and other predatory species due to artificial water sources and increased waste presence

Species or threatened ecological community

Petauroides Volans minor (northern greater glider)

Impact

This species is largely restricted to eucalypt forests and woodlands with high densities of hollow bearing trees (DAWE 2020). Modelling suggests that they require native forest patches of at least 160 km2 to maintain viable populations (Eyre 2002).

Essential habitat for the species is mapped within much of the proposed inundation area (Attachment A Figure 3 MNES). The species has been historically recorded within the project area and confirmed from locations during preliminary site surveillance.

The composition and condition of the habitat will be investigated as part of the EIS and the extent to which it is likely to be impacted determined based on the ability to avoid impacts through project design and/or minimise through the adoption of appropriate management actions. Given the proximity of the habitat to the Bowen River and the necessary riparian buffers applied to the irrigated areas it is unlikely that the project would have a significant impact on northern greater glider habitat at this location. A significance assessment in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance will be undertaken as part of the EIS.

Notwithstanding assessment to be undertaken as part of an EIS, potential impacts include:

— Vegetation clearing (loss of habitat) and associated habitat fragmentation
— Injury and mortality as a result of clearing, entanglement on fences and increased traffic and people movements

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

within habitat areas
— Dispersion or control of weeds and invasive species leading to changes in abundance and availability of foraging habitat
— Increased predation through increased activity from pest animals such as dogs, foxes, cats and other predatory species due to artificial water sources and increased waste presence
— Air, noise, vibration and dust pollution resulting disturbance and degradation of habitat.

Species or threatened ecological community

Eucalyptus raveretiana (black ironbox)

Impact

Black ironbox occurs on banks of creeks, rivers and other watercourses, on clayey or loamy soil and in areas of remnant vegetation. The species is historically recorded and individuals have been observed within the proposed project area.
Much of the development area is subject to historic land clearing activities and is used for grazing, including within mining buffer areas. Large intact areas of remnant vegetation are likely retained in riparian areas that would be retained such that it is unlikely that the project would have a significant impact on the species or its habitat. A significance assessment in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance will be undertaken as part of the EIS.
The potential project impact on this species includes:
— Vegetation clearing (loss of habitat) and associated habitat fragmentation
— Dispersion of weeds and invasive species
— Land management practices increasing stream bank erosion.

Species or threatened ecological community

Ozothamnus eriocephalus

Impact

The species is a shrub which grows to approximately 1 m high. Its range is restricted to east-central Queensland between Bowen and Mackay. Occurs in a range of habitat types including the margins of disturbed notophyll vine forest, margins of gallery forest, microphyll vine forest, tall open New England Blackbutt (Eucalyptus andrewsii) - E. resinifera forest with an understorey of Allocasuarina littoralis, in open eucalypt forest and on rocky ridges with Eucalyptus spp. - Acacia spp. scrub (Queensland Herbarium 2009). It is also known from the edge of creek banks and in crevices on steep granite slopes, often in sunny situations. It is known from moderate to high elevations ranging from 380–950 m. It occurs on skeletal, sandy or gravelly soils or occasionally deeper red-brown clay loams derived from granites and sandstones (Bean 1992, 199b; Pollock 1997). The species has historically been recorded within the project area and the nearest individual record is located south east of the project area within Eungella National Park.
A significance in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance will be undertaken as part of the EIS.
The potential project impact on this species includes:
— Vegetation clearing (loss of habitat) and associated habitat fragmentation
— Dispersion of weeds and invasive species
— Land management practices increasing stream bank erosion.

Species or threatened ecological community

Denisonia maculata (Ornamental snake)

Impact

The preferred habitat is within, or adjacent to, habitat that is favoured by frogs. The species is known to prefer woodlands and open forests associated with moist areas, particularly gilgai mounds and depressions.
The species has previously been recorded within the desktop search extent along the southern pipeline investigation corridor.
The potential project impact on this species includes:
— Vegetation clearing (loss of habitat) and associated habitat fragmentation
— Land management practices increasing stream bank erosion.
— Injury and mortality as a result of clearing and increased traffic and people movements within habitat areas
— Dispersion or control of weeds and invasive species during construction leading to changes in abundance and availability of foraging habitat and restriction of ground-level movement
— Increased predation during construction and operation through increases in dogs, foxes, cats and other predatory

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

species due to artificial water sources and increased waste material
— Air, noise, vibration and dust pollution resulting in disturbance and degradation of habitat.

Species or threatened ecological community

Natural grasslands of the Queensland Central Highlands and northern Fitzroy Basin

Impact

In Queensland, the Natural grasslands of the Queensland Central Highlands and northern Fitzroy Basin TEC includes areas that meet the descriptions of seven REs. Desktop review has identified that RE 11.3.2 and RE 11.8.11 are mapped for sections of the Moranbah pipeline investigation corridor (Figure 3 (Attachment A)). The diagnostic characteristics and condition thresholds of these areas will be investigated as part of the EIS and the extent to which they are impacted determined based on the ability to avoid impacts through project design and/or minimise through the adoption of appropriate management actions.

Preliminary site walkovers indicate that areas are likely to be incorrectly mapped and where present exist in isolated, degraded (through weed infestation and grazing practices) and fragmented patches such that project impacts would not result in a significant impact on the TEC. A significance assessment in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance will be undertaken as part of the EIS.

The potential project impact on this species includes:
— Vegetation clearing and associated habitat fragmentation
— Changes to hydrological regime
— Dispersion of weeds and invasive species during construction
— Air, noise, vibration and dust pollution during construction.

Details of impacts and disturbance to this species will be informed by ecology surveys and assessment undertaken as part of the EIS.

Species or threatened ecological community

Semi-evergreen vine thickets of the Brigalow belt (north and south) and Nandewar bioregion

Impact

In Queensland, the Semi-evergreen vine thickets of the Brigalow belt (north and south) and Nandewar bioregion TEC includes areas that meet the descriptions of 10 REs. Desktop review has identified that RE 11.11.18, RE 11.5.15 and RE 11.4.1 are mapped for sections of the Moranbah pipeline investigation corridor (Figure 3 (Attachment A)). The diagnostic characteristics and condition thresholds of these areas will be investigated as part of the EIS and the extent to which they are impacted determined based on the ability to avoid impacts through project design and/or minimise through the adoption of appropriate management actions.

Preliminary site walkovers indicate that areas are likely to be incorrectly mapped and where present exist in isolated, degraded (through weed infestation and grazing practices) and fragmented patches such that project impacts would not result in a significant impact on the TEC. A significance assessment in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance will be undertaken as part of the EIS.

The potential project impact on this species includes:
— Vegetation clearing and associated habitat fragmentation
— Changes to hydrological regime
— Dispersion of weeds and invasive species during construction
— Air, noise, vibration and dust pollution during construction.

Details of impacts and disturbance to this species will be informed by ecology surveys and assessment undertaken as part of the EIS.

Species or threatened ecological community

Other species

Impact

Other flora and fauna species listed as threatened under the EPBC Act may occur within the project area and will be assessed as part of the EIS.

2.4.2 Do you consider this impact to be significant?

☑ Yes ☐ No

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

2.5 Is the proposed action likely to have any direct or indirect impact on the members of any listed migratory species or their habitat?

☑ Yes ☐ No

Migratory species

Crocodylus porosus (Estuarine crocodile)

Impact

In Queensland the Salt-water Crocodile inhabits reef, coastal and inland waterways from Gladstone on the east coast, throughout the Cape York Peninsula and west to the Queensland-Northern Territory border (DAWE 2020). The species has previously been recorded within the desktop search extent and has potential to occur within the reservoirs at the end of the proposed pipelines.

A significance in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance will be undertaken as part of the EIS.

The potential project impact on this species includes:

— Vegetation clearing (loss of habitat) and associated habitat fragmentation
— Injury and mortality as a result of clearing and increased traffic and people movements within habitat areas
— Dispersion or control of weeds and invasive species during construction leading to changes in abundance and availability of foraging habitat and restriction of ground-level movement
— Increased predation during construction and operation through increases in dogs, foxes, cats and other predatory species due to artificial water sources and increased waste material
— Air, noise, vibration and dust pollution resulting in disturbance and degradation of habitat.

Migratory species

Hirundapus caudacutus (White-throated needletail)

Impact

In the coastal regions of Queensland, the species is almost exclusively aerial however they are most often seen above woodlands, open forests and rainforests. Preferred species habitat, such as open woodlands and cleared areas, is present within the proposed project footprint and sightings have previously been recorded east of the throughout the project area and surrounding region.

A significance in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance will be undertaken as part of the EIS.

Notwithstanding assessment to be undertaken as part of an EIS, potential impacts include:

— Vegetation clearing (loss of habitat and associated habitat fragmentation
— Injury and mortality as a result of increased traffic and people movements within habitat areas
— Dispersion of weeds and invasive species leading to changes in abundance and availability of foraging habitat and restriction of ground-level movement
— Increased predation during through increased activity from pest animals such as dogs, foxes, cats and other predatory species due to artificial water sources and increased waste material presence
— Air, noise, vibration and dust pollution resulting disturbance and degradation of habitat.

Migratory species

Myiagra cyanoleuca (Satin flycatcher)

Impact

In summer the species migrates to southern Australia to breed, before migrating north in winter to Queensland and further afield. The species inhabits eucalypt forests and woodlands and has previously been sighted in proximity to the northern section of the southern pipeline investigation corridor and Peter Faust Dam pipeline investigation corridor.

A significance in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance will be undertaken as part of the EIS.

Notwithstanding assessment to be undertaken as part of an EIS, potential impacts include:

— Vegetation clearing (loss of habitat and associated habitat fragmentation
— Injury and mortality as a result of increased traffic and people movements within habitat areas
— Dispersion of weeds and invasive species leading to changes in abundance and availability of foraging habitat and restriction of ground-level movement
— Increased predation during through increased activity from pest animals such as dogs, foxes, cats and other predatory species due to artificial water sources and increased waste material presence

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

Migratory species

Monarcha trivirgatus (Spectacled monarch)

Impact

In the coastal north-eastern and eastern Australia, the species is found in broadleaf thicket/shrub land, subtropical rainforests, tropical rainforests and wet sclerophyll forests. There are extensive records of the species around the Eungella Dam and potential habitat may also be available along the Peter Faust Dam pipeline investigation corridor.

A significance in accordance with the Significant Impact Guidelines 1.1 – Matters of National Environmental Significance will be undertaken as part of the EIS.

Notwithstanding assessment to be undertaken as part of an EIS, potential impacts include:

— Vegetation clearing (loss of habitat and associated habitat fragmentation

— Injury and mortality as a result of increased traffic and people movements within habitat areas

— Dispersion of weeds and invasive species leading to changes in abundance and availability of foraging habitat and restriction of ground-level movement

— Increased predation during through increased activity from pest animals such as dogs, foxes, cats and other predatory species due to artificial water sources and increased waste material presence

Air, noise, vibration and dust pollution resulting disturbance and degradation of habitat.

2.5.2 Do you consider this impact to be significant?

☐ Yes ☑ No

2.6 Is the proposed action to be undertaken in a marine environment (outside Commonwealth marine areas)?

☐ Yes ☑ No

2.7 Is the proposed action likely to be taken on or near Commonwealth land?

☐ Yes ☑ No

2.8 Is the proposed action taking place in the Great Barrier Reef Marine Park?

☐ Yes ☑ No

2.9 Is the proposed action likely to have any direct or indirect impact on a water resource from coal seam gas or large coal mining development?

☐ Yes ☑ No

2.10 Is the proposed action a nuclear action?

☐ Yes ☑ No

2.11 Is the proposed action to be taken by a Commonwealth agency?

☐ Yes ☑ No

2.12 Is the proposed action to be undertaken in a Commonwealth Heritage place overseas?

☐ Yes ☑ No

2.13 Is the proposed action likely to have any direct or indirect impact on any part of the environment in the Commonwealth marine area?

☐ Yes ☑ No

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

Section 3

Description of the project area

3.1 Describe the flora and fauna relevant to the project area

A desktop review and a preliminary site walkover has been undertaken for the project area to inform a preliminary likelihood of occurrence assessment (Attachment D Likelihood of occurrence assessment), with the following species identified as known or likely to occur:

Threatened ecological communities

- Brigalow (Acacia harpophylla dominant and codominant)
- Poplar box grassy woodland on alluvial plains

Flora and fauna

- Birds
  - Squatter pigeon (vulnerable)
  - White-throated needletail (vulnerable)
- Mammals
  - Northern quoll (endangered)
  - Koala (vulnerable)
  - Northern greater glider (vulnerable)
- Plants
  - Black ironbox (vulnerable)
  - Ozothamnus eriocephalus (vulnerable)
- Reptiles

Migratory species

- Crocodylus porosus (salt-water crocodile)
- Monarcha trivirgatus (spectacled monarch)
- Myiagra cyanoleuca (satin flycatcher)
- Numenius minutus (little curlew).

Restricted invasive species

Weeds of national significance known to occur within the project area include:

- Cryposternum grandiflora (rubber vine)
- Parkinsonia aculeate (parkinsonian)
- Parthenium hysterophorus (parthenium weed)
- Vachellia nilotica (prickly acacia)

Other prohibited and/or restricted invasive plants under the Queensland Biosecurity Act 2014 include:

- Zizphus mauritiana (Chinee apple) is isolated to a few areas
- Harrisia martini (Martin applecactus)
- Opuntia tomentosa (velvety tree pear)
- Opuntia stricta (common prickly pear).

Feral animals predicted and/or known and likely to occur include: Rhinella marinma (cane toad), Canis lupus (domestic dog), Felis catus (domestic cat), Cervus timoriensis (rusa deer), Oryctolagus cuniculus (European rabbit), Sus scrofa (feral pig), Vulpes vulpes (red fox) and Canis lupus familiaris (wild dog).

Aquatic flora and fauna

Reliable rainfall in the project area provides high quality water and a range of aquatic habitat types, supporting high aquatic flora and fauna diversity. Sections of the Broken River have wide, high banks that are formed from high volumes of water during peak flow periods. The riparian zone is often within the river bed and adjacent to the low flow channel, rather than starting from the higher riverbanks. The condition of the riparian vegetation varies within the Broken sub catchment from good to very poor.

Riparian communities are generally dominated by Melaleuca fluviatilis, but include other melaleuca, eucalyptus, casuarina, and callistemon species. Riparian vegetation close to permanent waterholes or sections of year-round river flow provides important dry season refuge for various fauna, including species more widely dispersed at other times of the year (e.g. woodland birds and/ butterflies).

Eucalyptus raveretiana is a prominent riparian vegetation species throughout the Broken River, Urannah Creek and Massey Creek Aggregation, particularly on larger streams. A number of aquatic or semi-aquatic plant species, including wetland indicator species, are known to or may occur in the Bowen River basin and/or the Broken River, Urannah Creek and Massey Creek Aggregation.

Fish have largely adapted to the intermittent flow of the Broken River sub-catchment, and populations tend to boom during wet years. They retreat to refuge areas created by in-stream pools and nearby wetlands (especially deeper, more permanent ones) during dry periods.

Permanent waterholes along river channels are of importance in maintaining aquatic diversity as they act as recruitment sources for downstream areas during disturbances.

The preliminary likelihood of occurrence assessment (Attachment D Likelihood of occurrence assessment) undertaken indicates that no conservation significant aquatic species are likely to occur within the project area.

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

A total of 47 native fish species have been recorded in the Bowen River sub-basin and while some species do not currently have records detailing specific locations, 13 native species have been recorded from the Broken River, Urannah Creek and Massey Creek Aggregation. Of these 13 species, eight have been recorded in the vicinity of the dam inundation area.

Eungella Dam has been stocked with sooty grunter, sleepy cod, barramundi and very low numbers of southern saratoga. These species may be transported downstream during flood events which occur approximately once every four years.

Irwin's turtle (Elseya irwini) has been recorded in the Bowen sub-basin, is known to occur in the Broken River and suitable habitat for the species is present within the inundation area. While not currently listed under the EPBC Act, Irwin's turtle is locally significant and listed as high priority on the Queensland Government's Back on Track Priority Framework.

3.2 Describe the hydrology relevant to the project area (including water flows)

Surface water

The Burdekin Basin is the second-largest river basin in Australia; it has the largest mean annual discharge (8,327,681 ML mean annual flow at Clare gauge 1976–2016) and is tributary to the GBRWHA. The waterways in the basin vary from largely sandy, dry ephemeral creek systems to permanently flowing clear-water rivers and creeks originating in mountain rainforest.

The Burdekin drainage basin covers an area of approximately 130,109 km² and comprises four major sub-basins:

— Upper Burdekin 36,244.7 km²
— Suttor 73,935.8 km²
— Bowen 9,451.6 km²
— Lower Burdekin 10,477.4 km².

Urannah Dam and its proposed inundation area are in the Broken River sub-catchment of the Bowen sub-basin. Past assessment of groundwater in the Bowen sub-basin is generally localised to irrigation, mining, or domestic use areas The Broken River, which is the main river that will run through the proposed Urannah Dam, joins the Bowen River at Bowen Weir, approximately 35.6 km downstream of the dam site and 35 km southeast of Collinsville. The Bowen River joins the Burdekin River at Blue Valley Weir and the Burdekin River then flows north and east into the GBR. There are five water storages along the Bowen/Broken River, with a total storage capacity of approximately 230,000 ML. The largest of the storages is Eungella Dam, which has a capacity of 112,400 ML and is on the Broken River approximately 20 km upstream of the Urannah dam inundation area and 42 km upstream of the Urannah dam site.

The Broken River and its tributaries are major contributors to the flow of water and water quality into the Bowen and lower Burdekin Rivers. There is a substantial rainfall gradient in the sub-catchment, from more than 4,000 mm a year at the top of Clarke Range (which encompasses Eungella National Park and is upstream of Urannah Dam), to less than 600 mm a year near the junction of the Bowen and Broken Rivers. The mean annual rainfall at Urannah is 690 mm.

The Burdekin Basin is heavily influenced by variable inter-annual rainfall, with droughts and tropical cyclones (and associated flooding) approximately once every four years (SMEC, 2019a). It is probable that the construction of any dam wall on the Broken River will change the current downstream flow regime. The dam wall will allow small to moderate floods to be captured into storage and released as regulated flows to supply downstream users and meet environmental flow requirements. Further detailed modelling and optimisation of operations will be required to determine the degree of downstream effects.

The mean annual discharge of the Bowen River upstream of its confluence with the Broken River is 105,278 ML, but downstream of the confluence at the Pump Station Gauge the mean annual discharge is 797,566 ML. The mean discharge of the Broken River at Urannah is 355,712 ML. No months with zero discharge have been recorded at Urannah. The highest monthly discharge recorded at Urannah is 729,948 ML in February 1991 (records from 1962- 1998).

There are three major watercourses (Broken River, Bowen River and Hail/Bee Creek) and a variety of minor waterways which intersect with the project including Urannah Creek, Dicks Creek, Ernest Creek and Massey Creek associated with Urannah Dam as shown in Figure 4 (Attachment A).

Key surface water and hydrological information for the project area includes:

— The Peter Faust Dam pipeline corridor intersects with the O'Connell River and Proserpine River floodplains and crosses the Proserpine River and Broken River
— The Moranbah pipeline corridor intersects with the Bowen River and Isaac River floodplains and follows and crosses Exe Creek and meets Hail/Bee Creek
— The Broken River is the main watercourse which runs through the Eungella Dam pipeline corridor, instream distribution and Urannah Dam and proposed inundation area.

Surface water and hydrological assessments will be undertaken as part of the EIS to determine existing flows of the waterways within the project area.

Water quality

Within the Burdekin Basin, major sources of sediment appear to be affecting water quality; originating from hill slope erosion along with gully and stream bank erosion. The Burdekin Region Water Quality Improvement Plan 2016 notes that the bulk of fine sediment delivered from the Burdekin Basin to the Great Barrier Reef is derived from a small portion of the basin, primarily the Bowen, Broken, Bogie and Upper Burdekin catchments, with a large proportion of this load from grazing lands.

The Burdekin Falls Dam traps a large portion of the course particles and some of the fine particles, however the Bowen Broken Bogie catchments contribute the highest loads of fine material due to gully erosion.

Water quality assessments, including water quality monitoring as necessary, will be undertaken as part of the EIS to

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

determine existing water quality characteristics to inform the assessment undertaken as part of the EIS.

3.3 Describe the soil and vegetation characteristics relevant to the project area

Soils

The soils in the Burdekin region are varied, with extensive areas of moderately productive but fairly erodible red duplex soils, widespread highly productive black and red clays derived from basalt, and large areas of poor to moderately fertile sands and earths.

Large areas also have highly erodible dispersive soils. The Bowen sub-catchments have the highest rate of erosion due to exposed subsoils, indicating a significant loss of topsoil into the waterways as indicated by tracing data (Lewis et al., 2015).

Vegetation

The predominant vegetation characteristics of the region are typical of grazed native vegetation, with some conservation areas bordering proposed project areas maintaining more established vegetation.

Investigations of landscape vegetation will be undertaken within the EIS as relevant and across targeted areas to identify vegetation characteristics within the project area.

3.4 Describe any outstanding natural features and/or any other important or unique values relevant to the project area

Eungella National Park is classified as a protected area (estate) under the Nature Conservation Act 1999 (NC Act) and is located upstream of the proposed Urannah Dam. The national park was first gazetted in 1936 and is managed by the Queensland Parks and Wildlife Service (QPWS) under the management objectives to “preserve and present its remarkable natural and cultural values for all time”.

The inundation area along Urannah Creek, Dicks Creek, Ernest Creek and Massey Creek are mapped under the NC Act as being of very high riverine conservation significance, and the inundation area along the Broken River is mapped as being of high riverine conservation significance. These creeks and rivers form part of the Broken River, Urannah Creek and Massey Creek Aggregation, which is currently listed in the directory of nationally important wetlands and includes some of the least disturbed examples of riverine wetland in Central Queensland.

Other nationally important wetlands mapped within the vicinity of the project area include:

— Eungella Dam

Nationally important wetlands within the project area are shown in (Figure 5 Wetlands) Attachment A.

No wetlands of high ecological significance are mapped for the project. No wetlands or watercourses in high ecological value waters are mapped for the project area.

3.5 Describe the status of native vegetation relevant to the project area

Threatened ecological communities

There are no TECs listed under the EPBC Act predicted within the inundation area of the proposed Urannah Dam. Four TECs were identified from the protected matters search within the project area for the water distribution network.

A preliminary likelihood of occurrence assessment has been undertaken for the project as shown in Attachment D Likelihood of occurrence assessment. The likelihood of occurrence found that two TECs have constituent REs mapped within the project area as shown in Attachment A Figure 3 MNES.

Ecology surveys will be undertaken as part of the EIS to confirm presence or absence of TECs within the project area.

Remnant vegetation/regional ecosystems

Mapping indicates that the inundation area for the Urannah Dam is predominantly remnant vegetation (Category B Least Concern and Of Concern REs). Two small polygons of high value regrowth vegetation (Category C Of Concern RE and Category R vegetation) are mapped within the Urannah Dam inundation area. In the order of 10,500 ha of vegetation is mapped within the Urannah Dam and associated inundation area.

The pipeline routes will as far as practicable follow previously disturbed and degraded areas, including within road reserves and existing utility easements. Regulated vegetation mapped along the pipeline corridors comprise:

— Peter Faust Dam pipeline corridor – Category B Endangered, Of Concern and Least Concern REs. Category C Of Concern REs are mapped for areas where the pipeline is proposed to cross a waterway or drainage channel

— Moranbah pipeline corridor - Category B Endangered, Of Concern and Least Concern REs. Category C and Category R regulated vegetation is mapped for areas where the pipeline proposes to cross a waterway or drainage channel. As discussed above, RE 11.3.2 was recorded through the pipeline section – this RE forms part of the Poplar box grassy woodland on alluvial plains TEC. RE 11.4.9 was also recorded through the pipeline corridor – this RE forms part of Brigalow (Acacia harpophylla dominant and codominant) TEC.

REs located in the key project component footprints are shown in Figure 6 (Attachment A). Ecology surveys will be undertaken as part of the EIS to verify regulated vegetation in the project area.

3.6 Describe the gradient (or depth range if action is to be taken in a marine area) relevant to the project area

The topography of the Burdekin region is highly variable including mountain ranges, low lying hills and flood plains. The Clarke Range, which forms part of the Great Dividing Range, is situated to the east of the project area with the proposed dam footprint located within the steep valley on the Clarke Range periphery. The land to the west of the Clarke Range gradually

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

decreases in topographic variability, with the proposed irrigation precinct located primarily within an expansive lowland plain

Key topographic information for the project area includes:

— Highly variable elevation throughout the entirety of the project area; between approximately 100 m AHD and 700 m AHD
— Elevation is most variable within the irrigation precinct and Peter Faust Dam pipeline corridor
— In most project areas associated with Urannah Dam, stream flows are constrained by steep valley walls.

The existing topography and landform in the project area will be investigated further within the EIS.

3.7 Describe the current condition of the environment relevant to the project area

The project area extends through landscapes with a variety of conditions and disturbances. The dominant land use for the area has been identified as cattle grazing in native vegetation with the remaining area comprised of nature conservation areas. This suggests that the vegetation within the area is predominantly remnant (limited disturbance), with densely vegetated areas of conservation. The region has established agriculture and mining activities and is sparsely populated.

Top soil is limited in many regions of the project area, with high levels of soil erosion due to hill slope and gully erosion. This also influences water quality with large amounts of fine sediment, primarily from grazing lands, affecting aquatic environments within the Burdekin Basin.

Invasive fauna is abundant throughout the route including the cane toad, wild dog, feral cat, brown hare, rabbit, feral pig, red fox and other species.

Site investigations and data analysis will be undertaken within the EIS to confirm relevant environmental conditions.

3.8 Describe any Commonwealth Heritage places or other places recognised as having heritage values relevant to the project

According to the National Heritage Register, no areas or objects are identified within 5 km of the project area. European cultural heritage sites, as relevant, will be investigated as part of the EIS to determine areas of importance within the project area.

3.9 Describe any Indigenous heritage values relevant to the project area

Searches of the Queensland DATSIP cultural heritage database did not return results for registered places or Aboriginal cultural heritage sites within project areas. However high risk landscape features such as ephemeral water sources are commonly identified as places of importance to Aboriginal people and may include the Broken River and Massey Creek. Over such an extensive area, there is a high chance of Indigenous cultural heritage being present.

Aboriginal cultural heritage sites have been recorded in the surrounding region including:

— Rock shelters containing paintings and / or cultural deposits
— Camp sites and openstone artefact scatters
— Isolated stone artefacts
— Quarry extraction sites
— Scarred trees
— Native wells and significant water sources
— Walking tracks
— Burial places (pre and post European settlement)
— Ceremonial sites
— Story places and / or landforms of Aboriginal cultural sensitivity
— Culturally-significant landscape features (waterholes, old growth vegetation, habitat areas, bush tucker, bush medicine, etc.)
— Post-contact story places and camps.

To date the following Aboriginal parties have been identified as potentially having an interest in the project area, subject to final project footprints being determined:

— Barada Barna People
— Birriah People
— Gia People
— Widi People of the Nebo Estate #1
— Widi People of the Nebo Estate #2
— Yuwibara People .

Aboriginal cultural heritage assessments will be undertaken within the EIS to identify cultural heritage values within the project area. Unless cultural heritage is included in a relevant native title agreement, a Cultural Heritage Management Plan will be developed in accordance with the provisions of the Aboriginal Cultural Heritage Act 2003.

3.10 Describe the tenure of the action area (e.g. freehold, leasehold) relevant to the project area

Urannah Dam is located on Lands Lease tenure within Lot 1522 on Plan SP272352. The inundation area extends across the lot into Lot 1 on Plan HLN252 (Land Lease).

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

The northern water pipeline investigation corridor traverses primarily Lands Lease tenures, but also includes Freehold, State Forest and Profit a' Pendre parcels, together with areas of road reserve tenure and Unallocated State Land associated with waterway crossings. The southern water pipeline investigation corridor traverses mostly Freehold and Lands Lease tenure together with road reserves.

There are a number of exploration permits for coal, minerals and petroleum and/or mining leases which exist over the water pipeline investigation corridors.

Tenure types and extents within the project boundary are shown in Figure 7 (Attachment A), with a list of all tenure types within each project component shown in Attachment B Tenure.

3.11 Describe any existing or any proposed uses relevant to the project area

Land use

The project area is typical of a rural setting in terms of existing infrastructure, including homesteads, local roads and agricultural properties with associated peri-urban development within small towns. Mining activity is concentrated in the area north-west of the proposed Urannah Dam and further south along the Moranbah pipeline investigation corridor.

The land within the proposed Urannah Dam inundation area is currently used for grazing in dense, native vegetation. Land uses within the project area are shown in Figure 8 (Attachment A).

Whitehaven WS Pty Ltd (Whitehaven Coal) proposed to develop the Winchester South Project, a greenfield metallurgical coal mine south-east of Moranbah. An EIS is currently being prepared. A number of proposed transport corridors linking mining activities in the south to the Port of Abbot Point traverse the areas west of the proposed Urannah Dam in the vicinity of the Bowen River.

Building Queensland is leading the development of the Burdekin Falls Dam Raising Project's detailed business case in partnership with Sunwater Limited. The business case (including environmental assessment) is investigating long-term water supply requirements and options for raising the Burdekin Falls Dam wall. The existing Burdekin Falls Dam is located on the Burdekin River. The Bowen River is a tributary to the Burdekin River with the confluence downstream of the Burdekin Falls Dam and south west of the proposed irrigation precinct. The Water Plan (Burdekin Basin) envisaged a number of development scenarios including the development of Urannah Dam and raising BFD, both in isolation and combined, indicating that the Government envisaged a scenario under which both development options would be required to meet regional water demands.

Urban areas

There are several small towns within the wider project area, which have largely been established to support resource activities that occur within these areas. These include:

- Scottsville
- Dittmer
- Eungella
- Glenden
- Nebo
- Moranbah
- Collinsville.

Infrastructure

The existing Bowen Weir, located approximately 35.6 km downstream of the dam site, will be utilised within the water distribution component of the project. Additional infrastructure surrounding the Bowen Weir will allow distribution and servicing as part of the proposed Collinsville Irrigation Scheme Project and customers on the left and right banks of the Bowen River. Eungella Dam is located upstream of the proposed Urannah Dam.

There are several existing pipelines which run adjacent to or within close proximity to the proposed water distribution network of the project, including approximately eight pump stations along these pipelines. The existing pipelines include:

- Sunwater – BMP
- Sunwater – EWP/ eastern extension.

As shown in Figure 9 (Attachment A) there is an extensive network of Ergon lower voltage pole mounted distribution substations scattered across the project area as well as fewer higher voltage ones.

Powerlink's 275KV transmission line between Collinsville and Nebo runs north to south along the western edge of the project boundary.

There are four other water storages within proximity to the project area, including:

- Eungella Dam (on the Broken River upstream of the proposed Urannah Dam)
- GOSS (on the Bowen River downstream of the proposed Urannah Dam)
- Bowen River Weir (on the Bowen River downstream of the proposed Urannah Dam) and GOSS
- Peter Faust Dam (at the northern end of the proposed northern water pipeline corridor).

Key infrastructure networks within the project area are shown Figure 9 (Attachment A) and will be detailed further in the EIS with consideration of the utility providers and local government guidelines and policies

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

Section 4

Measures to avoid or reduce impacts

4.1 Describe the measures you will undertake to avoid or reduce impact from your proposed action

The environmental management and mitigation measures required for the project will be determined during the EIS stage and developed in consultation with relevant authorities and in accordance with legislative, policy and industry guidelines.

A number of tools will be developed and implemented, including:

— Environmental management framework
— Environmental management plans
— Environmental, social and cultural values specific management plans.

The project has adopted the principles of the mitigation hierarchy, whereby impacts are addressed through the preferential order of avoidance, minimisation and compensated (offset). For the impacts identified within Section 2, the following mitigation strategies are proposed:

Water quality

The GBRWHA and GBR may be indirectly impacted through potential impacts to water quality associated with land use change associated with the proposed Collinsville Irrigation Scheme (subject of a separate EPBC Act Referral). A water quality monitoring program has commenced with 12 sites being sampled at least monthly (subject to rainfall events). Data will be supplemented with publicly available and Queensland Government supplied data. Water quality data, together with soils data and the outcomes of a land suitability assessment will be used to develop a water quality model to predict impacts associated with irrigated farming conditions and end of system loads relevant to the Reef Plan 2050. The model will facilitate scenario testing for best management practice cropping techniques. As necessary, additional protection and enhancement measures will be applied such as artificial wetlands, riparian area restoration, and gully erosion protection.

Water extraction will be guided by the requirements of the Queensland Water Act 2000 and provisions of the Water Plan (Burdekin Basin) 2007, including maintenance of environmental flows within the Bowen River and into downstream reaches of the Burdekin River.

Vegetation clearing, associated habitat fragmentation and habitat loss

The project will require vegetation clearing and associated habitat fragmentation and loss. Design aspects to minimise environmental impacts are under consideration. Water pipeline alignments have sought to avoid impacts on vegetation and habitat areas, through co-location within previously cleared or degraded areas and existing road reserves and easements.

An Environmental Management Plan (EMP), including a Flora and Fauna Management Plan (FFMP), Vegetation Management Plan (VMP) and Bushfire Management Plan, will be prepared and implemented to detail protective actions and procedures of terrestrial environments. The EMP will include actions to minimise unnecessary clearing, including limiting clearing to the smallest area practicable, and prioritising existing cleared and disturbed areas for infrastructure and temporary works.

Fauna injury and mortality

Clearing of vegetation and fauna habitat and increased traffic and people movements as a result of the project have the potential to injure or result in fauna mortality.

An EMP will be developed, including a FFMP, Traffic Management Plan (TMP) and Workforce Management Plan, and implemented to detail actions and procedures for the protection of the terrestrial environments. Impacts to fauna species as a result of construction activities will be managed in accordance with conditions of an approved Recovery Plan under the EPBC Act and a qualified fauna spotter catcher will be onsite during construction to relocate individuals, where necessary. Sequential clearing will be undertaken allowing fauna time to move away from the area. Enforcing speed limits and restricting night works will be considered.

Design options are being considered to minimise fauna injury and mortality during operation, through appropriate infrastructure to safely facilitate fish passage.

Dispersion or control of weeds and invasive species

An EMP will be developed, including a Weed and Pest Management Plan (WPMP), and implemented to detail actions and procedures for the protection of the terrestrial environments. The EMP will include actions to minimise the spread of weeds and invasive species through both human and vehicle controls. Ongoing implementation of weed and pest control will be required and undertaken to ensure any outbreaks are controlled into operations.

Increased predation during construction and operation

An EMP will be developed, including a WPMP, VMP and Waste Management Plan, and implemented to detail actions and procedures for the protection of the terrestrial environments. The EMP will include actions to minimise the attraction of predator species and limit impact to MNES species habitat.

Air, noise, vibration and dust pollution

An EMP will be developed, including an Air Quality (dust) Management Plan, Noise and Vibration Management Plan and TMP, and implemented to detail actions and procedures for the protection of the terrestrial environment

4.2 For matters protected by the EPBC Act that may be affected by the proposed action, describe the proposed environmental outcomes to be achieved

Environmental outcomes sought for the project include:

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

- Avoid as far as practicable impacts on MNES and MSES
- Where avoidance is not possible, minimise and mitigate impacts through the development and implementation of management actions, including development of management plans and undertaking monitoring programs
- Promote the use of best management practices for agricultural activities that conserve water and minimise environmental harm
- Protect and restore habitat, including riparian areas and wetlands, where necessary.

Management plans for MNES will be prepared as defined in Section 4.1 to manage impacts during construction and operation of the project. The project is expected to comply with reef protection regulations without exemption and provides a clear opportunity for agricultural producers within the proposed irrigation area to improve land practices and efficiencies. This will not only allow for responsible resource use and potentially lowered operation costs but also improvement of water quality and overall GBR health. In accordance with the Environmental Protection Regulation 2019, new or expanded commercial cropping and horticulture activities in the Burdekin region will require an environmental authority. Minimum practice agricultural standards relating to fertiliser application, maintaining ground cover, measures to limit soil erosion and record keeping, will apply.

Desktop reviews of environmental constraints and opportunities are being used to inform project design and route and site selection. This will be further supported by outcomes of a site survey and field campaign. The hierarchy approach of avoid, minimise and/or mitigate and manage will be utilised. Where impacts cannot be avoided and significant residual impacts are predicted offsets will be proposed.

Based on currently available information it is likely that residual impacts on MNES will persist after avoidance, mitigation and management measures are applied. Offsets will be proposed in accordance with the Australian Government's EPBC Act Environmental Offsets Policy.

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

Section 5

Conclusion on the likelihood of significant impacts

5.1 You indicated the below ticked items to be of significant impact and therefore you consider the action to be a controlled action

- ☐ World Heritage properties
- ☐ National Heritage places
- ☐ Wetlands of international importance (declared Ramsar wetlands)
- ☑ Listed threatened species or any threatened ecological community
- ☐ Listed migratory species
- ☐ Marine environment outside Commonwealth marine areas
- ☐ Protection of the environment from actions involving Commonwealth land
- ☐ Great Barrier Reef Marine Park
- ☐ A water resource, in relation to coal seam gas development and large coal mining development
- ☐ Protection of the environment from nuclear actions
- ☐ Protection of the environment from Commonwealth actions
- ☐ Commonwealth Heritage places overseas
- ☐ Commonwealth marine areas

5.2 If no significant matters are identified, provide the key reasons why you think the proposed action is not likely to have a significant impact on a matter protected under the EPBC Act and therefore not a controlled action

Not applicable.

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

Section 6

Environmental record of the person proposing to take the action

6.1 Does the person taking the action have a satisfactory record of responsible environmental management? Explain in further detail

Urannah Water Scheme Pty Ltd (or its subsidiaries) has not had any prosecutions for environmental harm under either Commonwealth or State legislation.

6.2 Provide details of any past or present proceedings under a Commonwealth, State or Territory law for the protection of the environment or the conservation and sustainable use of natural resources against either (a) the person proposing to take the action or, (b) if a permit has been applied for in relation to the action – the person making the application

There are no proceedings against Urannah Water Scheme Pty Ltd under either Commonwealth or State legislation.

6.3 If it is a corporation undertaking the action will the action be taken in accordance with the corporation's environmental policy and framework?

☑ Yes ☐ No

6.3.1 If the person taking the action is a corporation, provide details of the corporation's environmental policy and planning framework

Urannah Water Scheme Pty Ltd as project developer operates under a Project Delivery Management Plan, and maintains a Risk Management Plan and a comprehensive risk register for the project. The risk assessment process will evolve as the project moves from planning and design into construction, commissioning and operations. Environmental hazards and risks will be included and updates adopted. Construction and operational management plans will be incorporated into project delivery programs. Further, the project has adopted a Corridor and Land Access Management Plan as part of its corporate compliance framework.

6.4 Has the person taking the action previously referred an action under the EPBC Act, or been responsible for undertaking an action referred under the EPBC Act?

☐ Yes ☑ No

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

Section 8

Proposed alternatives

Do you have any feasible alternatives to taking the proposed action?

Yes ☑ No

Australian Government
Department of Agriculture, Water and the Environment

Note: PDF may contain fields not relevant to your application. These fields will appear blank or unticked. Please disregard these fields.

Section 9

Person proposing the action

9.1.1 Is the person proposing the action a member of an organisation?

☑ Yes ☐ No

Organisation

Organisation name	URANNAH WATER SCHEME PTY LTD
Business name	
ABN	85632222578
ACN	
Business address	145 Ann St, Brisbane City, 4000, QLD, Australia
Postal address	
Main Phone number	1800 269 368
Fax	
Primary email address	office@bowenutilities.com
Secondary email address	

9.1.2 I qualify for exemption from fees under section 520(4C)(e)(v) of the EPBC Act because I am:

☐ Small business
☑ Not applicable

9.1.2.2 I would like to apply for a waiver of full or partial fees under Schedule 1, 5.21A of the EPBC Regulations *

☐ Yes ☑ No

9.1.3 Contact

First name	Kerry
Last name	Huston
Job title	CEO
Phone	0422 015 171
Mobile	0422 015 171
Fax	
Email	pm@bowenutilities.com
Primary address	145 Ann St, Brisbane City, 4000, QLD, Australia
Address	

Declaration: Person proposing the action

I, ___KERRY HUSTON_____, declare that to the best of my knowledge the information I have given on, or attached to the EPBC Act Referral is complete, current and correct. I understand that giving false or misleading information is a serious offence. I declare that I am not taking the action on behalf or for the benefit of any other person or entity.

Signature: ..... Date: 23/06/2020

I, _KERRY HUSTON_____, the person proposing the action, consent to the designation of _URANNAH WATER SCHEME PTY LTD_ as the proponent for the purposes of the action described in this EPBC Act Referral.

Signature..... Date: 23/06/2020
