

7 Summary of Values

7.1 Flora

Five Ecological Vegetation Classes are present within the study area:

- Heathy Woodland (EVC 48) – Conservation Status of Least Concern;
- Clay Heathland (EVC 7) – Conservation Status of Vulnerable;
- Sedgy Riparian Woodland (EVC 198) – Conservation Status of Depleted;
- Damp Sands Herb-rich Woodland (EVC 3) – Conservation Status of Vulnerable; and
- Swamp Scrub (EVC 53) – Conservation Status of Vulnerable.

Clay Heathland is the most abundant EVC within the study area, and its centre of distribution in the bioregion is the eastern Otways. The total area of Clay Heathland (as mapped by Ecology Australia for this project) for the eastern Otways is 683.3 ha, of which 179.4 ha are located within the proposed mine extension area.

A total of 315 indigenous and naturalised exotic vascular plant species was recorded from the study area, of which 284 (90 %) are indigenous and 31 (10 %) are exotic.

No populations of targeted threatened plant species were recorded, and it is improbable that these species exist within the study area.

Six plant species listed as ‘rare’ or ‘poorly known’ within Victoria by DSE (2005) were recorded within the study area. An additional undescribed species, *Correa* aff. *reflexa* (Anglesea), considered as at least ‘vulnerable’ by the authors, was also recorded in the study area.

7.2 Fauna

A total of 85 vertebrate fauna species were recorded from the study area during targeted surveys. These comprise the following:

- 21 mammal species (17 native and 4 introduced species), including seven bat species;
- 53 bird species (51 native and two introduced species);
- Seven native reptile species; and
- Four native frog species.

One EPBC Act-listed fauna species were recorded within the study area, the Southern Brown Bandicoot *Isodon obesulus obesulus*. This species was recorded at 27 locations throughout the study area, which represents high-quality (i.e. breeding) habitat for this species.

Five FFG Act-listed fauna species were recorded from the study area: Southern Brown Bandicoot, Swamp Antechinus *Antechinus minimus maritimus*, White-footed Dunnart

Sminthopsis leucopus, Rufous Bristlebird *Dasyornis broadbenti caryochorus* and the Masked Owl *Tyto novaehollandiae novaehollandiae*. Of these species, all except the Masked Owl are considered to be 'resident' (i.e. make regular use) in the study area.

Three further species were recorded which are otherwise classified as threatened in Victoria (under DSE's Advisory List of Threatened Vertebrate Fauna 2007); the Southern Toadlet *Pseudophryne semimarmorata*, the Eastern Pygmy-possum *Cercartetus nanus* and the Mountain Dragon *Rankinia diemensis*. These species are considered to be resident within the study area.

Twenty species listed under the Migratory and/or Marine-overfly Schedules of the EPBC Act were recorded in the study area. The study area does not support an ecologically significant population, does not represent the edge of range of a species and it does not constitute critical or limiting habitat for these species, or those considered to have a moderate or high likelihood of regular occurrence.

Three further species listed under the FFG Act have been recorded previously in the study area; these are Lewin's Rail *Rallus pectoralis pectoralis*, Chestnut-rumped Heathwren *Hylacola pyrrhopygia* and Powerful Owl *Ninox strenua*. Of these three species, only the Chestnut-rumped Heathwren is likely to make regular use of the study area (i.e. be resident).

7.3 Net Gain

- The study area contains 266.15 Habitat Hectares of remnant vegetation.
- All remnant vegetation is of Very High Conservation Significance based on:
- Conservation Status of EVCs x Habitat Scores, and/or
- Occurrence of the 'best 50% of habitat for a threatened species' (Southern Toadlet).
- Offsets for the loss of Very High Conservation Significance vegetation are 2 x the calculated loss in Habitat Hectares.

9 Glossary

AVW	Atlas of Victorian Wildlife
Biodiversity	The variety of all life-forms, the different plants, animals and micro-organisms, the genes they contain, and the ecosystems of which they form a part.
Bioregion	Defined regions of Australia with coherent climatic and geophysical characteristics, which contain a set of distinct ecosystems and species.
Bioregional Conservation Status	The level of rarity, depletion and/or degradation of an ecosystem (or EVC) within a bioregion, as compared with its pre-1750 extent and condition.
CaLP Act	Catchment and Land Protection Act 1994
Classification	Creation of classes or categories. Usually involves combining groups of plant species and structural attributes recorded at sites into categories.
Community	Generic term of convenience to describe a unit of any rank, occupying a specific territory and having a characteristic composition and structure. A vegetation community has a characteristic species composition and structure.
Conservation status	Categorisation of biological assets (e.g. species, EVCs or plant communities) which reflects their rarity and likelihood of extinction within a defined region. In Victoria at present, the Department of Sustainability and Environment maintains an Advisory List of Rare and Threatened Plants, and a list recording the Bioregional Conservation Status of EVCs.
DSE	Department of Sustainability and Environment
Ecological Vegetation Class	A type of native vegetation classification described through a combination of its floristics, life form and ecological characteristics, and its association with particular environment attributes. Each EVC includes a collection of floristic communities that occur across a biogeographic range, and have similar habitat and ecological processes operating.
Endemic	Found only in a defined geographic area.
EPBC Act	<i>Environment Protection and Biodiversity Conservation Act</i> 1999 (Australian Government).
EVC	Ecological Vegetation Class. One or a number of floristic vegetation communities that appear to be associated with a recognisable and coherent environmental niche.
Exotic Vegetation	Any vegetation that is not native to Australia or its individual States and Territories. This can include non-indigenous vegetation.
FFG	<i>Flora and Fauna Guarantee Act</i> 1988 (Victorian State Government).
FIS	Flora Information System - a database of distribution and descriptive data on Victorian plants, managed by the Information Services Section of the Victorian Department of Sustainability and Environment.
GIS	Geographic Information System. A digital platform for creating, analysing and

	viewing maps and other spatially referenced data.
Ha	Hectares
Habitat hectares	Method for assessing the quality (or condition) of native vegetation. It is a compound index, each component describing different elements of vegetation or habitat structure (presence of large trees, tree canopy health, understorey structure and diversity, lack of weeds, length and size of logs, cover of litter, patch size, patch fragmentation, patch isolation). Habitat hectares is the method of assessment endorsed by Victorian State Government in <i>Victoria's Native Vegetation Management. A Framework for Action</i> (Department of Natural Resources and Environment 2002).
High Threat Weed	Introduced species (including non-indigenous 'natives') with the ability to out-compete and substantially reduce one or more indigenous life forms in the longer term assuming on-going current site characteristics and disturbance regime.
Indigenous Vegetation	Includes vegetation that is native to Australia as well as being native to a specific geographic region.
Native Vegetation	Vegetation that grows naturally in Australia, part of the pre-European flora.
Net Gain	Where, over a specified area and period of time, losses of native vegetation and habitat, as measured by a habitat hectares assessment, are reduced, minimised and more than offset by commensurate gains.
VFD	Victorian Fauna Display
VROTS	Victorian Rare or Threatened Species
WONS	Weeds of National Significance

Appendix 2 Fauna species recorded in the Alcoa Lease study area, October 2011 – March 2012.

Key

S- Seen, H- Heard, A- Anabat/Songmeter, I- Indirect evidence from scat/diggings/burrow etc., *- Exotic species, O- outside immediate study area boundary, but likely to occur within study area

EPBC – threatened species under the EPBC Act (not including species listed under the Migratory or Marine Overfly Schedules – see Table 8).

L – Listed under the FFG Act 1988.

CE – Critically Endangered; EN – Endangered; VU – Vulnerable; NT – Near Threatened; LC – Least Concern; DD – Data Deficient; CD – Conservation Dependent.
