APPENDIX K: SUMMARY OF POTENTIAL MATTERS OF ENVIRONMENTAL SIGNIFICANCE UNDER EPBC ACT 1999
K1. SUMMARY OF LIKELIHOOD OF OCCURRENCE OF MNES

A search using the *EPBC Act* Protected Matters Search Tool (PMST) identified 1 Listed Threatened Ecological Community (the “Eucalypt Woodlands of the Western Australian Wheatbelt”) and 9 Listed Threatened Flora Species as occurring, or potentially occurring within a 20km radius of the WMDE, the Bauxite Transport Corridor.

A search using the *EPBC Act* Protected Matters Search Tool (PMST) identified 1 Listed Threatened Ecological Community (the “Banksia Woodlands of the Swan Coastal Plain ecological community”) and 4 Listed Threatened Flora Species as occurring, or potentially occurring within a 20km radius of the CBME (collectively referred to as the Assessment Area).

A likelihood of occurrence assessment was undertaken for each of the potential listed threatened ecological community and threatened flora species potentially occurring within the WMDE and the Bauxite Transport Corridor, and the CBME. The assessment was based on nearby records and habitat availability.

The likelihood of occurrence of each of these threatened communities and species was assessed based on previous flora surveys since the early 1980’s (see Appendix A) for a range of clients (although primarily the Newmont Boddington Gold Mine and South32 Worsley Alumina Pty Ltd) and an understanding of the likelihood of the communities is discussed in Section 5.7 of the report and of the species in Section 5.2 of the report and Appendices D and F). The following tables summarize the threatened communities and threatened flora species that have been recorded, Tables K1 and K2.

Table K1: MNES Threatened Ecological Communities recorded near or within the Assessment Area

Threatened Ecological Community	Status: EPBC Act	WMDE and Bauxite Transport Corridor	CBME
Eucalypt Woodlands of the Western Australian Wheatbelt	Critically Endangered	Potential on eastern fringes of northern Jarrah Forest and does overlap with South32 leases, but was not in the proposed expansion areas of the WMDE and Bauxite Transport Corridor	Unlikely as not near Western Australian Wheatbelt.
Banksia Woodlands of the Swan Coastal Plain ecological community	Endangered	Unlikely as expansion areas occur on eastern sections of the northern Jarrah Forest (not the Swan Coastal Plain and therefore not in expansion areas)	Unlikely as expansion areas occur on eastern sections of the northern Jarrah Forest (not the Swan Coastal Plain and therefore not in expansion areas)

APPENDIX K: SUMMARY OF POTENTIAL MATTERS OF ENVIRONMENTAL SIGNIFICANCE UNDER EPBC ACT 1999

One threatened flora (*Caladenia hopperiana*) pursuant to the *EPBC Act 1999* has been recorded within the WMDE and two threatened flora (*Caladenia dorrienii* and *Eleocharis keigheryi*) pursuant to the *EPBC Act 1999* were recorded east of the southeastern expansion areas; but not within the WMDE or Bauxite Transport Corridor. *Caladenia hopperiana* is the only one of the three threatened species recorded in the WMDE.

- *Caladenia hopperiana* (formerly known as *Caladenia* sp. Quindanning) is Threatened under the *BC Act 2016* and Endangered under the *EPBC Act 1999* – occurs within and outside the WMDE in the south eastern section of the mapping (see Figures 5.12 and 5.13).
- *Caladenia dorrienii* is Threatened under the *BC Act 2016* and Endangered under the *EPBC Act 1999* – occurs outside and to the east of the WMDE (see Figure 5.10).
- *Eleocharis keigheryi* is Threatened under the *BC Act 2016* and Vulnerable under the *EPBC Act 1999* – occurs outside and to the east of the WMDE (see Figure 5.13).

No threatened flora species pursuant to the *EPBC Act 1999* have been recorded in the CBME area.

Table K2: MNES Threatened Flora recorded within the WMDE and Bauxite Transport Corridor

Species	Status under EPBC Act	Potential Occurrence / Recorded Location
<i>Caladenia hopperiana</i>	E	WMDE – 15 inside locations and 159 outside locations of WMDE and Transport Corridor; 20 plants inside and 261 outside.

The following text provides a summary of the three potential threatened flora species (sections K2.1 to K2.3).

APPENDIX K: SUMMARY OF POTENTIAL MATTERS OF ENVIRONMENTAL SIGNIFICANCE UNDER EPBC ACT 1999

K2. RECORDED THREATENED FLORA

K2.1 *CALADENIA DORRIENII* (T AND E)

Caladenia dorrienii is listed as a Threatened Flora under the State *Biodiversity Conservation Act 2016* and as Endangered under the Federal *Environmental Protection and Biodiversity Conservation Act 1999*.

Family: ORCHIDACEAE **Common Name:** Cossack Spider-orchid

Habit: Tuberous, perennial, herb, 0.1-0.2 m high.

Flower colour: white-cream-yellow

Flowering period: Sept to Nov.

Soils: Clayey loam. Moist sites adjacent to rivers and seasonal creeks.

IBRA Distribution: Avon Wheatbelt and Jarrah Forest

Florabase records: 16

Description:

This is a small orchid producing 1–3 distinctive flowers with narrow linear greenish-white sepals (modified leaves), and petals with longitudinal red veins and dark glandular hairy tips. The erect dorsal sepal (top 'petal') is 25–30 mm in length. The labellum (lower 'lip' petal) has a few irregular marginal teeth and two rows of closely set glands (7–8 in each row) along the middle. The flowers are produced on a slender, erect, hairy stem, up to 20 cm high. A narrow, linear leaf clasps this stem near its base and there is a short bract midway along its length. The plant is dormant between December and late April.

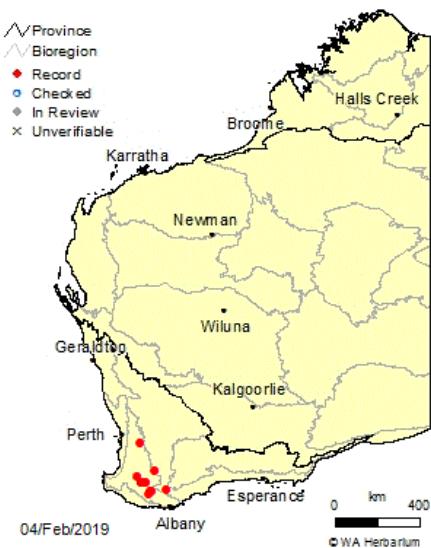

Number of Plants and Potential Populations

The results from previous data searches reflect the presence of some 14 plants on an area of private property outside the proposed Worsley Mining Development Envelope (WMDE) (Mattiske Consulting Pty Ltd 2019 – Flora and Vegetation report). Data sourced from Department of Biodiversity, Conservation and Attractions in 2018.

Associated vegetation communities:

Open Wandoo (*Eucalyptus wandoo*) or Jarrah (*E. marginata*) woodland. The species grows amongst low, scattered shrubs, annuals and dense low herbs, often on slopes and near streams. The occurrence at Boddington occurs at the current northern extent of its range according to the distribution available from the Florabase (WAH 1998-).

Caladenia dorrienii

K2.2 CALADENIA HOPPERIANA (T AND E)

Caladenia hopperiana is listed as a Threatened Flora under the State *Biodiversity Conservation Act 2016* and as Endangered under the Federal *Environmental Protection and Biodiversity Conservation Act 1999*.

Family: ORCHIDACEAE **Common Name:** Quindanning Spider Orchid, Boddington spider orchid

Habit: Erect herb, grows to 35cm high

Flower colour: one to four yellowish to creamy-white flowers to 6cm across.

Flowering period: Late Sept to Oct.

Soils: seasonal creeks and swamps.

IBRA Distribution: Jarrah Forest

Florabase records: 4

Number of Plants and Potential Populations

The results from previous data searches reflect the presence of some 200 to 280 plants (in some instances plant numbers were not recorded as historical records) in 6 to 7 locations; with the majority of records collected by South32 site environmental team members in the one valley system. This orchid has been recorded on the Mooradung Nature Reserve 32448, near tracks off the Pinjarra to Williams Road, near the Williams to Quindanning Road and on Timber Reserve 17125. These plants occur within and outside the Worsley Mining Development Envelope (WMDE) in the south eastern section of the mapping areas (Mattiske Consulting Pty Ltd 2019 Flora and Vegetation report). Data sourced from Department of Biodiversity, Conservation and Attractions in 2018 and South32 records.

Associated vegetation community:

Eucalyptus wandoo woodland on the margins of seasonal creeks and swamps with *Melaleuca viminea*, *Chorizandra enodis*, *Craspedia variabilis* and other orchid species including *Caladenia longicauda* subsp. *redacta*, *Diuris laxiflora* and *Prasophyllum gracile*. The occurrence at Boddington, within and near the Quindanning Timber Reserve, is relatively restricted to a local area, according to the distribution available from the Florabase (WAH 1998–)

APPENDIX K: SUMMARY OF POTENTIAL MATTERS OF ENVIRONMENTAL SIGNIFICANCE UNDER EPBC ACT 1999

K2.3 *ELEOCHARIS KEIGHERYI* (T AND V)

Eleocharis keigheryi is listed as a Threatened Flora under the State *Biodiversity Conservation Act 2016* and as Vulnerable under the Federal *Environmental Protection and Biodiversity Conservation Act 1999*.

Family: CYPERACEAE **Common Name:** Keighery's Eleocharis

Habit: Rhizomatous, clumped perennial, grass-like or herb (sedge), to 0.4 meters high. Semi-aquatic

Inflorescence: 4-6mm long, 1-2mm wide, colorless or pale green. Flower spike slightly broader than stem with spirally arranged, oblong to narrow ovate bracts. Flowers consist of three stamen and feathery stigma that divides into three.

Flowering period: August to November or December.

Soils: Clay, sandy loam. Emergent in freshwater: creeks, clay pans

IBRA Distribution: Avon Wheatbelt P2, Dandaragan Plateau, Lesueur Sandplain, Northern Jarrah Forest, Perth, Southern Jarrah Forest

Florabase records: 54

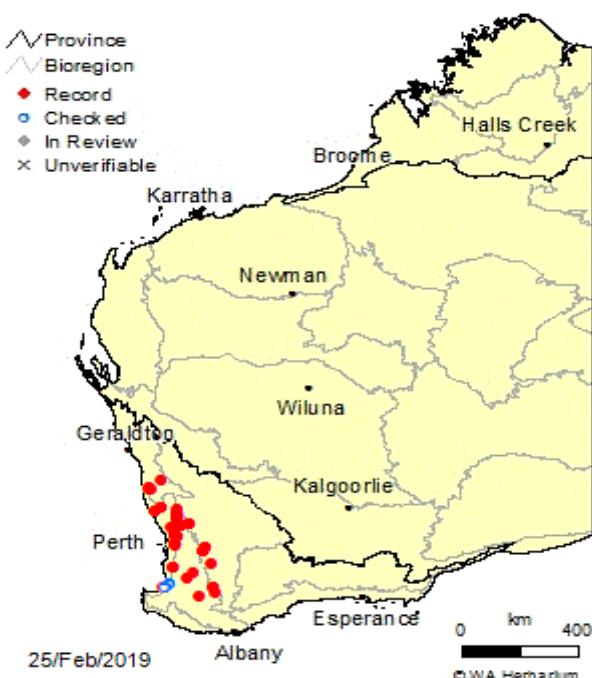

Number of Plants and Potential Populations

The results from previous data searches reflect the presence of 1 plant from the Deefor Wetland, Wandoo National Park, near York. This is outside the proposed Worsley Mining Development Envelope (WMDE) (data sourced from Department of Biodiversity, Conservation and Attractions in 2018). This plant occurs in a range of IBRA regions and as such is not restricted to the eastern areas of the northern Jarrah Forest.

Associated Vegetation: *Melaleuca teretifolia*, *Melaleuca lateritia* over *Leptocarpus canus*, *Chorizandra enodis* over *Villarsia capitata* and herbs. *Melaleuca lateritia* shrubland over aquatic herbs. Low open woodland of *Eucalyptus rudis*, over sedgeland, over herbs. *Melaleuca raphiophylla* trees over *Cyperus* sedgeland.

Associated species: *Melaleuca lateritia*, *Wurmbea* spp., *Tribonanthes* spp., *Leptocarpus* spp., *Chorizandra enodis*, *Stylium asymmetricum*, *Myriocephalus occidentalis*, *Amphibromus nervosus*, *Gratiola pubescens*, *Myriophyllum limnophyllum*.
