

Appendix 1 Western Australian Flora and Fauna Conservation Codes (DPAW 2017)

Specially protected fauna or flora are species* which have been adequately searched for and are deemed to be, in the wild, either rare, at risk of extinction, or otherwise in need of special protection, and have been gazetted as such.

Categories of specially protected fauna and flora are:

T Threatened species

Published as Specially Protected under the Wildlife Conservation Act 1950, and listed under Schedules 1 to 4 of the Wildlife Conservation (Specially Protected Fauna) Notice for Threatened Fauna and Wildlife Conservation (Rare Flora) Notice for Threatened Flora (which may also be referred to as Declared Rare Flora).

Threatened fauna is that subset of ‘Specially Protected Fauna’ declared to be ‘likely to become extinct’ pursuant to section 14(4) of the Wildlife Conservation Act.

Threatened flora is flora that has been declared to be ‘likely to become extinct or is rare, or otherwise in need of special protection’, pursuant to section 23F(2) of the Wildlife Conservation Act.

The assessment of the conservation status of these species is based on their national extent and ranked according to their level of threat using IUCN Red List categories and criteria as detailed below.

CR Critically endangered species

Threatened species considered to be facing an extremely high risk of extinction in the wild. Published as Specially Protected under the Wildlife Conservation Act 1950, in Schedule 1 of the Wildlife Conservation (Specially Protected Fauna) Notice for Threatened Fauna and Wildlife Conservation (Rare Flora) Notice for Threatened Flora.

EN Endangered species

Threatened species considered to be facing a very high risk of extinction in the wild. Published as Specially Protected under the Wildlife Conservation Act 1950, in Schedule 2 of the Wildlife Conservation (Specially Protected Fauna) Notice for Threatened Fauna and Wildlife Conservation (Rare Flora) Notice for Threatened Flora.

VU Vulnerable species

Threatened species considered to be facing a high risk of extinction in the wild. Published as Specially Protected under the Wildlife Conservation Act 1950, in Schedule 3 of the Wildlife Conservation (Specially Protected Fauna) Notice for Threatened Fauna and Wildlife Conservation (Rare Flora) Notice for Threatened Flora.

EX Presumed extinct species

Species which have been adequately searched for and there is no reasonable doubt that the last individual has died. Published as Specially Protected under the Wildlife Conservation Act 1950, in Schedule 4 of the Wildlife Conservation (Specially Protected Fauna) Notice for Presumed Extinct Fauna and Wildlife Conservation (Rare Flora) Notice for Presumed Extinct Flora.

IA Migratory birds protected under an international agreement

Birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and the Bonn Convention, relating to the protection of migratory birds. Published as Specially Protected under the Wildlife Conservation Act 1950, in Schedule 5 of the Wildlife Conservation (Specially Protected Fauna) Notice.

CD Conservation dependent fauna

Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened. Published as Specially Protected under the Wildlife Conservation Act 1950, in Schedule 6 of the Wildlife Conservation (Specially Protected Fauna) Notice.

OS Other specially protected fauna

Fauna otherwise in need of special protection to ensure their conservation. Published as Specially Protected under the Wildlife Conservation Act 1950, in Schedule 7 of the Wildlife Conservation (Specially Protected Fauna) Notice.

P Priority species

Possibly threatened species that do not meet survey criteria, or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of priority for survey and evaluation of conservation status so that consideration can be given to their declaration as threatened flora or fauna.

Species that are adequately known, are rare but not threatened, or meet criteria for near threatened, or that have been recently removed from the threatened species or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

1 Priority 1: Poorly-known species

Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.

2 Priority 2: Poorly-known species

Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.

3 Priority 3: Poorly-known species

Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.

4 Priority 4: Rare, Near Threatened and other species in need of monitoring

- (a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These species are usually represented on conservation lands.
- (b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for Vulnerable, but are not listed as Conservation Dependent.
- (c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.

* <i>Wahlenbergia capensis</i>	Cape Bluebell	

Appendix 6 Key to determining presence of the EPBC Act listed TEC Eucalypt woodlands of the Western Australian Wheatbelt (based on Approved Conservation Advice (including listing advice) for the Eucalypt Woodlands of the Western Australian Wheatbelt)**Description**

The Eucalypt woodlands of the Western Australian Wheatbelt TEC is composed of eucalypt woodlands dominated by a complex mosaic of eucalypt species with a single tree or mallet form over an understorey that is highly variable in structure and composition. A mallet habit refers to a eucalypt with a single, slender trunk and steep-angled branches that give rise to a dense crown. Many eucalypt species are considered iconic within the Wheatbelt landscape, for example, *Eucalyptus salmonophloia* (salmon gum), *E. loxophleba* subsp. *loxophleba* (York gum), *Eucalyptus rudis* subsp. *rudis*, *E. salubris* (gimlet), *E. wandoo* (wandoo) and the mallet group of species. Associated species may include *Acacia acuminata* (jam), *Corymbia calophylla* (marri) and *Eucalyptus marginata* (jarrah). The understorey structures are often bare to sparse, herbaceous, shrub of heath, chenopod-dominated, thickets (*Melaleuca* spp.) and saline areas with *Tecticornia* spp. The main diagnostic features include location, minimum crown cover of the tree canopy of 10% in a mature woodland, presence of key species and a minimum condition according to scale of Keighery (1994) that depends on size of a patch, weed cover and presence of mature trees. A patch is defined as a discrete and mostly continuous area of the ecological community and may include small-scale variations and disturbances, such as tracks or breaks, watercourses/drainage lines or localised changes in vegetation that do not act as a permanent barrier or significantly alter its overall functionality. Each patch of the community includes a buffer zone, an area that lies immediately outside the edge of a patch but is not part of the ecological community. The buffer zone is designed to minimise this risk to the ecological community.

Woodland vegetation with a very sparse eucalypt tree canopy and woodlands dominated by mallee forms characterised by multiple stems of similar size arising at or near ground level are not part of the ecological community. The ecological community is not likely to be present if it is dominated by non-eucalypt species in the tree canopy, for instance *Acacia acuminata* (jam) or *Allocasuarina huegeliana* (rock sheoak) even though these species may be present as an understorey or minor canopy component.

The community occupies a transitional zone between the wetter forests associated with the Darling Range and the southwest coast, and the low woodlands and shrublands of the semi-arid to arid interior. The Wheatbelt region where the ecological community occurs mostly encompasses two IBRA2 subregions: Avon Wheatbelt subregion AVW01 Merredin and Avon Wheatbelt subregion AVW02 Katanning. Patches of the ecological community may extend into adjacent areas of the primary Wheatbelt bioregions, such as the easternmost parts of the Jarrah Forest bioregion forming an extension of the Avon Wheatbelt landscape in that they comprise areas subject to similar climate, landscape and threats. These outlier patches generally occur south of Northam, extending around the vicinity of localities such as Wandering, Williams, Kojonup and Mount Barker (All locations south of Perth), and are limited to areas that are not on the Darling range, receive less than 600 mm mean annual rainfall and overlie the Yilgarn Craton geology. A third IBRA2 subregion includes Mallee subregion MAL02 Western Mallee and is located south of Perth. The ecological community is generally associated with the flatter, undulating relief, including drainage lines and saline areas.

The WA Wheatbelt woodlands ecological community potentially corresponds to 45 Beard (Shepherd *et al.* 2002) vegetation associations. The most likely equivalents are with the 37 associations that are dominant or unique within the Wheatbelt regions.

Key diagnostics

The key diagnostic characteristics summarise the main features that characterise the WA Wheatbelt Woodlands (refer below). For EPBC Act referral, assessment and compliance purposes, the national ecological community is limited to patches that meet the key diagnostic characteristics (1-4 below) plus the condition thresholds (diagnostic 5 below).

Condition thresholds

It is intended that the condition thresholds will exclude degraded patches from any requirement for protection, for instance:

- isolated paddock trees on farms;
- small or narrow stands of trees that serve as windbreaks or shelterbelts on farms and other properties; or
- roadside and other woodland remnants that are too small and narrow, or where the tree canopy has become too patchy and discontinuous (effectively <10% cover), or the understorey has lost considerable elements of its native structure and diversity.

Diagnostic 1 Location

Survey location occurs within one of the following three regions:

- Avon Wheatbelt bioregion - subregions AVW01 Merredin and AVW02 Katanning
- Mallee bioregion - MAL02 Western Mallee only
- Jarrah Forest bioregion – outlying patches in the eastern parts of JAF01 Northern Jarrah Forests and JAF02 Jarrah Forests adjacent to the Avon Wheatbelt, and are effectively an extension of the Avon Wheatbelt landscape. Within the Jarrah Forest bioregion, the ecological community occurs on landscapes that fall below 600 mm mean annual rainfall (Figure 1), are off the Darling Range, associated with the Yilgarn Craton geology and are generally heavily cleared. This covers the eastern to southeastern-most parts of the bioregion. The ecological community generally falls within the 300 to 600 mm average annual rainfall isohyets. The isohyets based on the latest 30-year average between 1976 to 2005 (BoM 2016) are most applicable to the current climatic regime.

.....2

Survey location occurs within region:

- Jarrah Forest bioregion – outlying patches in the eastern parts of JAF01 Northern Jarrah Forests and JAF02 Jarrah Forests adjacent to the Avon Wheatbelt. Within the Jarrah Forest bioregion, the ecological community occurs on landscapes that ARE ABOVE the 600 mm isohyet, are ON the Darling Range, NOT associated with the Yilgarn Craton geology and are NOT generally heavily cleared. This covers the eastern to southeastern-most parts of the bioregion. It generally DOES NOT fall within the 300 to 600 mm average annual rainfall isohyets. The isohyets based on the latest 30-year average between 1976 to 2005 (BoM 2016) are most applicable to the current climatic regime.

.....NOT

TEC

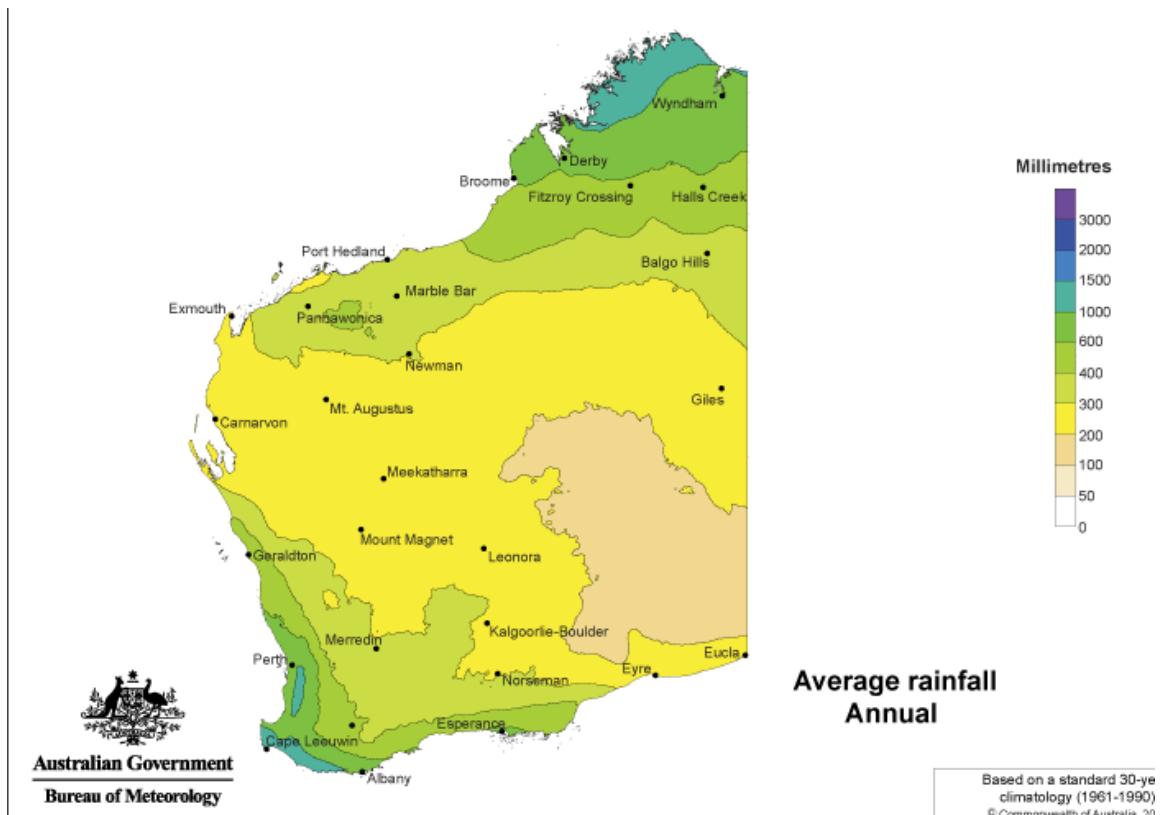

Figure 1 Isohyets of Western Australia (BoM 2016)

Diagnostic 2 Minimum crown canopy

The structure of the ecological community is a woodland in which the minimum crown cover of the tree canopy in a mature eucalypt woodland is 10% (crowns measured as if they are opaque). The maximum tree canopy cover usually is up to 40%. It may be higher in certain circumstances, for instance trees with a mallet growth form (multi-stemmed upper canopy) may be more densely spaced, or disturbances such as fire may result in an increased cover of canopy species during regeneration.

.....3

Crown cover of trees less than 10% but area recently disturbed (e.g. fire), presence of seedlings and/or saplings.

.....3

Crown cover of trees less than 10%, no evidence of recent disturbance, no presence of seedlings or saplings.

.....NOT

TEC

Diagnostic 3 Dominant *Eucalyptus* tree canopy

One or more of the key tree species in Table 1 are dominant or co-dominant, the trees are predominantly single trunked, not mallee (multi-stemmed).

.....4

Other species are present in the tree canopy (e.g. species in Table 2 or other taxa) but these collectively do not occur as dominants in the tree canopy.

4

Dominant woodlands with a mallee subcanopy (lower tree layer of mallee or non-eucalypt tree species). Upper eucalypt tree canopy must be present dominated by key woodland species in Table 2 and have cover of 10% or more.

4

Other species are present in the tree canopy (e.g. species in Table 2 or other taxa) and these collectively do occur as dominants in the tree canopy.

NOT

TEC

Table 1 Key eucalypt species. One or more of these species are dominant or co-dominant within a given patch of the ecological community

Scientific name	Common name/s
<i>Eucalyptus accedens</i>	powder-bark; powder-bark wandoo

<i>Eucalyptus leptopoda</i> subsp. <i>leptopoda</i>	Merredin mallee; Tammin mallee
<i>Eucalyptus loxophleba</i> subsp. <i>gratiae</i>	Lake Grace mallee
<i>Eucalyptus loxophleba</i> subsp. <i>lissophloia</i>	smooth-barked York gum
<i>Eucalyptus loxophleba</i> subsp. <i>supralaevis</i>	blackbutt York gum
<i>Eucalyptus macrocarpa</i>	mottlecah
<i>Eucalyptus marginata</i>	jarrah
<i>Eucalyptus moderata</i>	redwood mallee
<i>Eucalyptus obtusiflora</i>	Dongara mallee
<i>Eucalyptus olivina</i>	olive-leaved mallee
<i>Eucalyptus orthostemon</i>	diverse mallee
<i>Eucalyptus perangusta</i>	fine-leaved mallee
<i>Eucalyptus phaenophylla</i>	common southern mallee
<i>Eucalyptus phenax</i> subsp. <i>phenax</i>	white mallee
<i>Eucalyptus pileata</i>	capped mallee
<i>Eucalyptus platypus</i> subsp. <i>platypus</i>	moort
<i>Eucalyptus polita</i>	Parker Range mallet
<i>Eucalyptus sheathiana</i>	ribbon-barked mallee
<i>Eucalyptus sporadica</i>	Burnup mallee

<i>Eucalyptus subangusta</i> subsp. <i>subangusta</i>	grey mallee
---	-------------

The list is not comprehensive and presents the more common taxa encountered.

Diagnostic 4 Native understorey

A native understorey is present but is of variable composition, being a combination of grasses, other herbs and shrubs. A list of key species is summarised in Table 3. Any one of the structural understorey categories may or may not be present.

Bare to sparse understorey (e.g. under some mallet woodlands).

.....5

Herbaceous understorey – a ground layer of forbs and/or graminoids though a few, scattered shrubs may be present.

.....5

Scrub or heath understorey – comprises a mixture of diverse shrubs of variable height and cover. A ground layer of herbs and grasses is present to variable extent.

.....5

Chenopod-dominated understorey – a subset of the scrub category in which the prominent species present are saltbushes, bluebushes and related taxa (e.g. *Atriplex*, *Enchytraea*, *Maireana*, *Rhagodia* and *Sclerolaena*).

.....5

Thickets of taller shrub species understorey (e.g. *Melaleuca pauperiflora*, *M. acuminata*, *M. uncinata*, *M. lanceolata*, *M. sheathiana*, *M. adnata*, *M. cucullata* and/or *M. lateriflora*, *Allocasuarina campestris* with *Melaleuca hamata* or *M. scalena*). A range of other shrub and ground layer species may occur among or below the thickets.

.....5

Salt tolerant species understorey (e.g. samphire, *Tecticornia* spp.).

.....5

Shrublands or herblands in which the tree canopy layer is very sparse to absent, either naturally or maintained so through long-term disturbance. Native vegetation where a tree canopy was formerly present is often referred to as 'derived' or 'secondary' vegetation. These sites would fall below the 10 per cent minimum canopy cover threshold for a woodland.

<i>Schoenus nanus</i>	tiny bog-rush
<i>Schoenus sculptus</i>	gimlet bog-rush

<i>Schoenus subfascicularis</i>	
---------------------------------	--

Diagnostic 5 Vegetation condition

Minimum condition for patches of the WA Wheatbelt Woodlands ecological community. For each category, both the weed cover and mature tree presence criteria must apply plus one of either patch size or patch width, depending on whether the patch is a roadside remnant or not.

Category A:

Patch corresponds to a condition of pristine / excellent / very good (Keighery, 1994) or a high RCV (RCC, 2014).

Exotic plant species account for 0 to 30% of total vegetation cover in the understorey layers (i.e. below the tree canopy).

Mature trees (diameter at breast height (dbh) of 30 cm or above) may be present or absent.

Patch size (non-roadside) 2 ha or more with no gap in native vegetation cover exceeding 50 m width.

.....TEC

Patch width roadside only (based on the native understorey component not width of the tree canopy) 5 m or more.

.....TEC

Patch corresponds to a condition of pristine / excellent / very good (Keighery, 1994) or a high RCV (RCC, 2014).

Exotic plant species account for 0 to 30% of total vegetation cover in the understorey layers (i.e. below the tree canopy).

Mature trees (diameter at breast height (dbh) of 30 cm or above) may be present or absent.

Patch size (non-roadside) less than 2 ha.

.....NOT TEC

Patch width roadside only (based on the native understorey component not width of the tree canopy) less than 5 m.

.....NOT TEC

Category B:

Patch corresponds to a condition of good (Keighery, 1994) or a medium-high RCV (RCC, 2014).

Exotic plant species account for more than 30, to 50% of total vegetation cover in the understorey layers (i.e. below the tree canopy).

Mature trees are present with at least 5 trees per 0.5 ha.

Patch size (non-roadside) 2 ha or more with no gap in native vegetation cover exceeding 50 m width.

.....TEC

Patch width roadside only (based on the native understorey component not width of the tree canopy) 5 m or more.

.....TEC

Patch corresponds to a condition of good (Keighery, 1994) or a medium-high RCV (RCC, 2014), **AND** retains important habitat features.

Exotic plant species account for more than 30, to 50% of total vegetation cover in the understorey layers (i.e. below the tree canopy).

Mature trees are present with at least 5 trees per 0.5 ha.

Patch size (non-roadside) less than 2 ha.

..... **NOT TEC**

Patch width roadside only (based on the native understorey component not width of the tree canopy) less than 5 m.

..... **NOT TEC**

Category C:

Patch corresponds to a condition of good (Keighery, 1994) or a medium-high RCV (RCC, 2014), **AND** retains important habitat features.

Exotic plant species account for more than 30, to 50% of total vegetation cover in the understorey layers (i.e. below the tree canopy).

Less than 5 mature trees per 0.5 ha are present.

Minimum patch size (non-roadside) 5 ha or more.

..... **TEC**

Patch size (non- roadside) less than 5 ha

..... **NOT TEC**

Category D:

Patch corresponds to a condition of degraded to good (Keighery, 1994) or a medium-Low to medium-high RCV (RCC, 2014).

Exotic plant species account for more than 50 to 70% of total vegetation cover in the understorey layers (i.e. below the tree canopy).

Mature trees are present with at least 5 trees per 0.5 ha.

Minimum patch size (non-roadside) 5 ha or more.

..... **TEC**

Patch width roadside only (based on the native understorey component not width of the tree canopy) 5 m or more

..... **TEC**

Patch corresponds to a condition of degraded to good (Keighery, 1994) or a medium-low to medium-high RCV (RCC, 2014).

Exotic plant species account for more than 50 to 70% of total vegetation cover in the understorey layers (i.e. below the tree canopy).

Less than 5 mature trees per 0.5 ha are present.

..... **NOT TEC**

Appendix 8 Flora species inventory for the study area

Family	Taxon
Amaranthaceae	<i>Ptilotus drummondii</i>
Amaranthaceae	<i>Ptilotus manglesii</i>
Amaranthaceae	<i>Ptilotus polystachyus</i>
Apiaceae	<i>Daucus glochidiatus</i>
Apiaceae	<i>Platysace cirrosa</i>
Apiaceae	<i>Xanthosia candida</i>
Apiaceae	<i>Xanthosia ciliata</i>
Araliaceae	<i>Hydrocotyle ?callicarpa</i>
Araliaceae	<i>Trachymene cyanopetala</i>
Asparagaceae	<i>Arthropodium dyeri</i>
Asparagaceae	* <i>Asparagus asparagooides</i> (WoNS)
Asparagaceae	<i>Chamaescilla corymbosa</i>
Asparagaceae	<i>Dichopogon capillipes</i>
Asparagaceae	<i>Laxmannia squarrosa</i>
Asparagaceae	<i>Lomandra ?preissii</i>
Asparagaceae	<i>Lomandra maritima</i>
Asparagaceae	<i>Lomandra micrantha</i> subsp. <i>micrantha</i>
Asparagaceae	<i>Lomandra rupestris</i>
Asparagaceae	<i>Lomandra</i> sp.
Asparagaceae	<i>Lomandra</i> sp. sterile
Asteraceae	<i>Angianthus preissianus</i>
Asteraceae	* <i>Arctotheca calendula</i>
Asteraceae	* <i>Cotula bipinnata</i>
Asteraceae	<i>Hyalosperma cotula</i>
Asteraceae	* <i>Hypochaeris glabra</i>
Asteraceae	* <i>Hypochaeris radicata</i>
Asteraceae	<i>Lagenophora huegelii</i>
Asteraceae	* <i>Monoculus monstrosus</i>
Asteraceae	<i>Olearia rufa</i>
Asteraceae	<i>Podolepis aristata</i> subsp. <i>aristata</i>
Asteraceae	<i>Podolepis gracilis</i>
Asteraceae	<i>Podolepis lessonii</i>
Asteraceae	<i>Pterochaeta paniculata</i>
Asteraceae	<i>Rhodanthe citrina</i>
Asteraceae	<i>Siloxerus multiflorus</i>
Asteraceae	* <i>Sonchus asper</i>
Asteraceae	* <i>Sonchus oleraceus</i>
Asteraceae	* <i>Ursinia anthemoides</i>
Asteraceae	* <i>Ursinia anthemoides</i> subsp. <i>anthemoides</i>
Boraginaceae	<i>Heliotropium curassavicum</i>
Boryaceae	<i>Borya sphaerocephala</i>
Brassicaceae	* <i>Raphanus raphanistrum</i>

Family	Taxon
Campanulaceae	<i>Wahlenbergia gracilenta</i>
Caryophyllaceae	* <i>Petrorhagia dubia</i>
Casuarinaceae	<i>Allocasuarina ?campestris</i>
Casuarinaceae	<i>Allocasuarina campestris</i>
Casuarinaceae	<i>Allocasuarina huegeliana</i>
Casuarinaceae	<i>Allocasuarina humilis</i>
Casuarinaceae	<i>Casuarina obesa</i>
Celastraceae	<i>Stackhousia pubescens</i>
Celastraceae	<i>Tripterococcus brunonis</i>
Chenopodiaceae	<i>Atriplex semilunaris</i>
Chenopodiaceae	<i>Enchyalaena lanata</i>
Chenopodiaceae	<i>Maireana marginata</i>
Chenopodiaceae	<i>Rhagodia ?drummondii</i>
Chenopodiaceae	<i>Salicornia quinqueflora</i> subsp. <i>quinqueflora</i>
Chenopodiaceae	<i>Tecticornia lepidosperma</i>
Chenopodiaceae	<i>Tecticornia</i> sp. sterile 1
Colchicaceae	<i>Burchardia congesta</i>
Cyperaceae	<i>Baumea rubiginosa</i>
Cyperaceae	<i>Ficinia nodosa</i>
Cyperaceae	<i>Lepidosperma calcicola</i>
Cyperaceae	<i>Lepidosperma costale</i>
Cyperaceae	<i>Lepidosperma leptostachyum</i>
Cyperaceae	<i>Lepidosperma pubisquamum</i>
Cyperaceae	<i>Lepidosperma</i> sp.
Cyperaceae	<i>Lepidosperma squamatum</i>
Cyperaceae	<i>Lepidosperma tenue</i>
Cyperaceae	<i>Mesomelaena preissii</i>
Cyperaceae	<i>Mesomelaena pseudostygia</i>
Cyperaceae	<i>Schoenus clandestinus</i>
Cyperaceae	<i>Tetraria octandra</i>
Dilleniaceae	<i>Hibbertia commutata</i>
Dilleniaceae	<i>Hibbertia hibbertioides</i> var. <i>hibbertioides</i>
Dilleniaceae	<i>Hibbertia hypericoides</i>
Dilleniaceae	<i>Hibbertia lasiopus</i>
Dilleniaceae	<i>Hibbertia miniata</i> (P4)
Dilleniaceae	<i>Hibbertia montana</i> (P4)
Dilleniaceae	<i>Hibbertia polystachya</i>
Dioscoreaceae	<i>Dioscorea hastifolia</i>
Droseraceae	<i>Drosera ?macrantha</i>
Droseraceae	<i>Drosera</i> sp.
Elaeocarpaceae	<i>Tetratheca confertifolia</i>
Ericaceae	<i>Astroloba compactum</i>
Ericaceae	<i>Astroloba serratifolium</i>

Family	Taxon
Ericaceae	<i>Leucopogon darlingensis</i> subsp. <i>rectus</i> (P2)
Ericaceae	<i>Leucopogon planifolius</i>
Euphorbiaceae	? <i>Beyeria lechenaultii</i> (sterile)
Euphorbiaceae	<i>Euphorbia drummondii</i>
Fabaceae	<i>Acacia acuminata</i>
Fabaceae	<i>Acacia anarthros</i> (P3)
Fabaceae	<i>Acacia applanata</i>
Fabaceae	<i>Acacia drummondii</i> subsp. <i>affinis</i> (P3)
Fabaceae	<i>Acacia huegelii</i>
Fabaceae	<i>Acacia lasiocarpa</i>
Fabaceae	<i>Acacia lasiocarpa</i> var. <i>lasiocarpa</i>
Fabaceae	<i>Acacia lasiocarpa</i> var. <i>sedifolia</i>
Fabaceae	<i>Acacia microbotrya</i>
Fabaceae	<i>Acacia pulchella</i>
Fabaceae	<i>Acacia pulchella</i> var. <i>goadbyi</i>
Fabaceae	<i>Acacia pulchella</i> var. <i>pulchella</i>
Fabaceae	<i>Acacia shuttleworthii</i>
Fabaceae	<i>Acacia</i> sp. seedling
Fabaceae	<i>Acacia tetragonophylla</i>
Fabaceae	<i>Acacia willdenowiana</i>
Fabaceae	<i>Bossiaea eriocarpa</i>
Fabaceae	<i>Bossiaea spinescens</i>
Fabaceae	<i>Daviesia angulata</i>
Fabaceae	<i>Daviesia debilior</i> subsp. <i>sinuans</i> (P3)
Fabaceae	<i>Daviesia decurrens</i>
Fabaceae	<i>Daviesia hakeoides</i>
Fabaceae	<i>Gastrolobium calycinum</i>
Fabaceae	<i>Gastrolobium capitatum</i>
Fabaceae	<i>Gastrolobium polystachyum</i>
Fabaceae	<i>Gastrolobium spathulatum</i>
Fabaceae	<i>Gastrolobium spinosum</i>
Fabaceae	<i>Gompholobium aristatum</i>
Fabaceae	<i>Gompholobium tomentosum</i>
Fabaceae	<i>Hovea pungens</i>
Fabaceae	<i>Kennedia coccinea</i>
Fabaceae	<i>Kennedia prostrata</i>
Fabaceae	* <i>Lupinus cosentinii</i>
Fabaceae	<i>Trifolium</i> ? <i>hirtum</i>
Fabaceae	* <i>Trifolium campestre</i>
Fabaceae	* <i>Trifolium hirtum</i>
Gentianaceae	* <i>Centaurium tenuiflorum</i>
Goodeniaceae	<i>Dampiera alata</i>
Goodeniaceae	<i>Dampiera lavandulacea</i>

Family	Taxon
Goodeniaceae	<i>Goodenia pulchella</i>
Goodeniaceae	<i>Goodenia sp. sterile</i>
Goodeniaceae	<i>Goodenia trichophylla</i>
Goodeniaceae	<i>Lechenaultia biloba</i>
Goodeniaceae	<i>Lechenaultia floribunda</i>
Goodeniaceae	<i>Verreauxia reinwardtii</i>
Haemodoraceae	<i>Anigozanthos humilis</i> subsp. <i>humilis</i>
Haemodoraceae	<i>Conostylis androstemma</i>
Haemodoraceae	<i>Conostylis candidans</i>
Haemodoraceae	<i>Conostylis setigera</i> subsp. <i>setigera</i>
Haloragaceae	<i>Glischrocaryon aureum</i>
Haloragaceae	<i>Gonocarpus cordiger</i>

Iridaceae	<i>Patersonia ?occidentalis</i> var. <i>occidentalis</i>
Iridaceae	<i>Patersonia ?occidentalis</i>
Iridaceae	<i>Patersonia occidentalis</i>
Iridaceae	<i>Patersonia rudis</i> subsp. <i>rudis</i>
Iridaceae	* <i>Romulea rosea</i>
Iridaceae	* <i>Romulea rosea</i> var. <i>australis</i>
Iridaceae	* <i>Romulea rosea</i> var. <i>communis</i>
Juncaceae	* <i>Juncus acutus</i> subsp. <i>acutus</i>
Lamiaceae	<i>Hemiandra pungens</i>
Lamiaceae	<i>Hemigenia incana</i>
Lauraceae	<i>Cassytha glabella</i> forma <i>casuarinae</i>
Lauraceae	<i>Cassytha pomiformis</i>
Lauraceae	<i>Cassytha racemosa</i> forma <i>racemosa</i>
Malvaceae	* <i>Malva parviflora</i>
Malvaceae	<i>Seringia velutina</i>
Malvaceae	<i>Thomasia foliosa</i>
Malvaceae	<i>Thomasia grandiflora</i>
Myrtaceae	<i>Calothamnus pachystachyus</i> (P4)

Family	Taxon
Myrtaceae	<i>Calothamnus sanguineus</i>
Myrtaceae	<i>Corymbia calophylla</i>
Myrtaceae	<i>Ericomyrtus tenuior</i>
Myrtaceae	<i>Eucalyptus accedens</i>
Myrtaceae	<i>Eucalyptus camaldulensis</i>
Myrtaceae	<i>Eucalyptus loxophleba</i>
Myrtaceae	<i>Eucalyptus loxophleba</i> subsp. <i>loxophleba</i>
Myrtaceae	<i>Eucalyptus rufa</i>
Myrtaceae	<i>Eucalyptus wandoo</i>
Myrtaceae	<i>Eucalyptus wandoo</i> subsp. <i>wandoo</i>
Myrtaceae	<i>Hypocalymma angustifolium</i>
Myrtaceae	<i>Leptospermum erubescens</i>
Myrtaceae	<i>Melaleuca lateriflora</i>
Myrtaceae	<i>Melaleuca lateritia</i>
Myrtaceae	<i>Melaleuca marginata</i>
Myrtaceae	<i>Melaleuca parviceps</i>
Myrtaceae	<i>Melaleuca radula</i>
Myrtaceae	<i>Melaleuca rhaphiophylla</i>
Myrtaceae	<i>Melaleuca scalena</i>
Myrtaceae	<i>Melaleuca sclerophylla</i> (P3)
Myrtaceae	<i>Melaleuca trichophylla</i>
Myrtaceae	<i>Verticordia serrata</i> var. <i>ciliata</i>
Oleaceae	* <i>Olea europaea</i> subsp. <i>europaea</i>
Orchidaceae	<i>Ericksonella saccharata</i>
Orchidaceae	<i>Eriochilus dilatatus</i> subsp. <i>multiflorus</i>
Oxalidaceae	* <i>Oxalis pes-caprae</i>
Oxalidaceae	* <i>Oxalis purpurea</i>
Phyllanthaceae	<i>Phyllanthus calycinus</i>
Phyllanthaceae	<i>Poranthera microphylla</i>
Poaceae	* <i>Aira caryophyllea</i>
Poaceae	* <i>Aira cupaniana</i>
Poaceae	<i>Amphipogon caricinus</i>
Poaceae	<i>Amphipogon turbinatus</i>
Poaceae	<i>Austrostipa campylachne</i>
Poaceae	<i>Austrostipa elegantissima</i>
Poaceae	<i>Austrostipa exilis</i>
Poaceae	<i>Austrostipa hemipogon</i>
Poaceae	<i>Austrostipa macalpinei</i>
Poaceae	<i>Austrostipa semibarbata</i>
Poaceae	<i>Austrostipa variabilis</i>
Poaceae	* <i>Avena barbata</i>
Poaceae	* <i>Avena sativa</i>
Poaceae	* <i>Briza maxima</i>

Family	Taxon
Poaceae	* <i>Briza minor</i>
Poaceae	<i>Bromus arenarius</i>
Poaceae	* <i>Bromus diandrus</i>
Poaceae	* <i>Bromus rubens</i>
Poaceae	<i>Chloris truncata</i>
Poaceae	* <i>Cynodon dactylon</i>
Poaceae	<i>Dactyloctenium radulans</i>
Poaceae	* <i>Ehrharta calycina</i>
Poaceae	* <i>Ehrharta longiflora</i>
Poaceae	<i>Enteropogon ramosus</i>
Poaceae	* <i>Eragrostis curvula</i>
Poaceae	* <i>Hordeum glaucum</i>
Poaceae	* <i>Hordeum leporinum</i>
Poaceae	* <i>Hordeum marinum</i>
Poaceae	* <i>Lolium perenne</i>
Poaceae	* <i>Lolium perenne x rigidum</i>
Poaceae	* <i>Lolium rigidum</i>
Poaceae	<i>Neurachne alopecuroidea</i>
Poaceae	* <i>Parapholis incurva</i>
Poaceae	* <i>Pentameris airoides</i>
Poaceae	* <i>Pentameris airoides</i> subsp. <i>airoides</i>
Poaceae	Poaceae sp.
Poaceae	Poaceae sp. seedling
Poaceae	* <i>Polypogon monspeliensis</i>
Poaceae	<i>Rytidosperma caespitosum</i>
Poaceae	* <i>Triticum aestivum</i>
Polygalaceae	<i>Comesperma integerrimum</i>
Polygalaceae	<i>Comesperma volubile</i>
Primulaceae	* <i>Lysimachia arvensis</i>
Proteaceae	<i>Adenanthes cygnorum</i>
Proteaceae	<i>Banksia armata</i>
Proteaceae	<i>Banksia armata</i> var. <i>armata</i>
Proteaceae	<i>Banksia bipinnatifida</i> subsp. <i>multifida</i>
Proteaceae	<i>Banksia fraseri</i> var. <i>fraseri</i>
Proteaceae	<i>Banksia kippistiana</i> var. <i>kippistiana</i>
Proteaceae	<i>Banksia nobilis</i> subsp. <i>nobilis</i>
Proteaceae	<i>Banksia serratuloides</i> subsp. <i>serratuloides</i> (VU, EPBC Act; WC Act)
Proteaceae	<i>Banksia sessilis</i>
Proteaceae	<i>Banksia sessilis</i> var. <i>sessilis</i>
Proteaceae	<i>Banksia sphaerocarpa</i> var. <i>sphaerocarpa</i>
Proteaceae	<i>Conospermum densiflorum</i> subsp. <i>unicephalatum</i> (EN, EPBC Act; WC Act)
Proteaceae	<i>Grevillea bipinnatifida</i> subsp. <i>bipinnatifida</i>

Family	Taxon
Proteaceae	<i>Grevillea drummondii</i> (P4)
Proteaceae	<i>Grevillea synapheae</i> subsp. <i>synapheae</i>
Proteaceae	<i>Hakea chromatropa</i> (P1)
Proteaceae	<i>Hakea erinacea</i>
Proteaceae	<i>Hakea incrassata</i>
Proteaceae	<i>Hakea lissocarpa</i>
Proteaceae	<i>Hakea prostrata</i>
Proteaceae	<i>Hakea stenocarpa</i>
Proteaceae	<i>Isopogon</i> sp.
Proteaceae	<i>Persoonia coriacea</i>
Proteaceae	<i>Persoonia sulcata</i> (P4)
Proteaceae	<i>Petrophile striata</i>
Proteaceae	<i>Synaphea grandis</i> (P4)
Proteaceae	<i>Synaphea rangiferops</i> (P2)
Proteaceae	<i>Synaphea</i> sp.
Proteaceae	<i>Synaphea</i> sp. GNH
Proteaceae	<i>Synaphea spinulosa</i> subsp. <i>major</i>
Pteridaceae	<i>Cheilanthes austrotenuifolia</i>
Restionaceae	<i>Desmocladus asper</i>
Restionaceae	<i>Desmocladus lateriticus</i>
Restionaceae	<i>Lepidobolus preissianus</i>
Restionaceae	<i>Loxocarya cinerea</i>
Rhamnaceae	<i>Spyridium globulosum</i>
Rhamnaceae	<i>Trymalium odoratissimum</i> subsp. <i>odoratissimum</i>
Rubiaceae	<i>Opercularia vaginata</i>
Rutaceae	<i>Boronia ovata</i>
Santalaceae	<i>Santalum acuminatum</i>
Sapindaceae	<i>Dodonaea divaricata</i>
Solanaceae	* <i>Solanum nigrum</i>
Solanaceae	<i>Solanum</i> sp.
Styliadiaceae	<i>Levenhookia stipitata</i>
Styliadiaceae	<i>Styliodium caricifolium</i>
Styliadiaceae	<i>Styliodium leptophyllum</i>
Styliadiaceae	<i>Styliodium pubigerum</i>
Styliadiaceae	<i>Styliodium</i> sp. sterile
Styliadiaceae	<i>Styliodium zeicolor</i>
Typhaceae	<i>Typha orientalis</i>
Urticaceae	<i>Parietaria cardiostegia</i>
Xanthorrhoeaceae	<i>Xanthorrhoea preissii</i>

Appendix 9 Eucalypt woodlands of the Western Australian wheatbelt TEC – site assessment
