Dear Julian,

RE: Targeted Search for Rare and Priority Flora and TEC Evaluation on Harford Way, Girrawheen

Please find following the results of a targeted search for Rare and Priority Flora on Lot 14143 (16) Harford Way, Girrawheen (formerly the Hainsworth Primary School).

1 Background

Lot 14143 (16) Harford Way, Girrawheen is located approximately 12km from the Perth Central Business District. The site was previously Hainsworth Primary School which was closed in 2010 and demolished in mid-2011.

A significant tree and vegetation survey was undertaken by PGV Environmental in July 2013. A small area of bushland to the south that had not been cleared for the development of the school was identified. The development of the site for residential purposes would result in the bushland being cleared so PGV Environmental were engaged to survey the bushland for the presence of any flora species listed under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) to determine if any such species occurred on the site and could be impacted as a result of the proposed development.

The vegetation in the bushland was described as a *Banksia attenuata/B. menziesii/Eucalyptus marginata* Low Open Woodland over a *Xanthorrhoea preissii* Open Heath. The dominant species indicate that the vegetation may be considered representative of the newly listed Threatened Ecological Community (TEC) *Banksia Woodlands on the Swan Coastal Plain*. The TEC, in accordance with the *Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) (s 266B) Approved Conservation Advice (incorporating listing advice) for the Banksia Woodlands of the Swan Coastal Plain ecological community* (hereafter referred to as the ‘conservation advice’), is defined by Area and

Condition as well as dominant species. The site was examined to determine if the vegetation is part of the TEC.

2 Targeted Species

Database searches indicated that a number of species that are listed as Critically Endangered, Endangered or Vulnerable have been located or are potentially located in the vicinity of the site. The targeted search was undertaken for species identified in the Protected Matters Search Tool Report (Attachment 1) and the Naturemap Report (Attachment 2) as outlined in Table 1.

Table 1: Conservation Significant Flora identified in Database Searches

Species Name	Common Name	Status under EPBC Act	Preferred Habitat	Likelihood to be present on the site
<i>Andersonia gracilis</i>	Slender Andersonia	Endangered	Found on white/grey sand, sandy clay, gravelly loam near winter wet swamps which do not occur on the site.	Highly Unlikely
<i>Anigozanthos viridis subsp. <i>terraspectans</i></i>	Dwarf Green Kangaroo Paw	Vulnerable	Prefers grey sand, clay loam and winter-wet depressions which do not occur on the site.	Highly Unlikely
<i>Caladenia huegelii</i>	Grand Spider Orchid	Endangered	Sand or clay loam.	Possible
<i>Calectasia cyanea</i>	Blue Tinsel Lily	Critically Endangered	White, grey or yellow sand, gravel but not found in the Perth regoin	No – Considered to be a database error
<i>Diuris micrantha</i>	Dwarf Bee-orchid	Vulnerable	Occur on brown loamy clay in winter-wet swamps, in shallow water which are not located on the site.	Highly Unlikely
<i>Diuris purdiei</i>	Purdie's Donkey Orchid	Endangered	Prefers grey-black sand, moist winter-wet swamps which are not on the site.	Highly Unlikely
<i>Drakaea elastica</i>	Glossy-leaved Hammer Orchid	Endangered	Occurs on low-lying situations adjoining winter-wet swamps, which do not occur on the site.	Highly Unlikely
<i>Drakaea micrantha</i>	Dwarf Hammer Orchid	Endangered	Usually found on cleared firebreaks or open sandy patches that have been disturbed with in Jarrah Banksia woodland or thickets of Spearwood (<i>Kunzea ericifolia</i>) (Williams <i>et al.</i> , 2001) to the south of this location.	Highly Unlikely

Species Name	Common Name	Status under EPBC Act	Preferred Habitat	Likelihood to be present on the site
<i>Grevillea maccutcheonii</i>	McCutcheon's Grevillea	Endangered	Shallow soils over laterite, clay and seasonally inundated sites and known only from a single location near the base of the Whicher Range, south east of Busselton, in Western Australia – likely to be an error in the database.	Highly Unlikely
<i>Lepidosperma rostratum</i>	Beaked Lepidosperma	Endangered	Occurs in sand, sandy loam in winter-wet heath which are not habitats contained on the site.	Highly Unlikely
<i>Theelymitra dedmaniarum</i> (listed as <i>Theelymitra manginii</i>)	Cinnamon Sun-orchid	Endangered	This species inhabits open wandoo woodland on red-brown sandy loam, associated with dolerite and granite outcropping (DoE, 2014) and the soils on the site are not lateritic.	Highly Unlikely
<i>Theelymitra stellata</i>	Star Sun-orchid	Endangered	This species inhabits open wandoo woodland on red-brown sandy loam, associated with dolerite and granite outcropping (DoE, 2014) which is habitat not present on the site.	Highly Unlikely

Many of the species occur in damplands, winter wet depressions or seasonally inundated areas which do not occur on the site, however were included in the search. One species was considered to be remotely possibly present in the bushland area which was *Caladenia huegelii* (Grand Spider Orchid).

3 Methodology

3.1 Targeted Search for Flora Species

The site was examined on 14 September 2016 by Dr Paul van der Moezel, a highly experienced botanist with 30 years' experience in the Perth region. The area of bushland was traversed on foot using a 5x5m grid. The coverage was very high due to the open nature of the bushland and the small size (0.6ha).

Table 2 outlines the flowering period for each species in the Targeted Search and ensures the timing is such that all species are recognisable at the time of the survey.

Table 2: Flowering Period and Recognisability.

Species Name	Common Name	Status under EPBC Act	Flowering Period	Recognisability
<i>Andersonia gracilis</i>	Slender Andersonia	Endangered	Sept-Nov	Surveyed in flowering period and identifiable when not flowering
<i>Anigozanthos viridis</i> subsp. <i>terraspectans</i>	Dwarf Green Kangaroo Paw	Vulnerable	Aug-Sept	Surveyed in flowering period and identifiable when not flowering
<i>Caladenia huegelii</i>	Grand Spider Orchid	Endangered	Sept-Oct	Surveyed at peak flowering period (Attachment 3)
<i>Diuris micrantha</i>	Dwarf Bee-orchid	Vulnerable	Sept-Oct	Surveyed in flowering period
<i>Diuris purdiei</i>	Purdie's Donkey Orchid	Endangered	Sept-Oct	Surveyed in flowering period
<i>Drakaea elastica</i>	Glossy-leaved Hammer Orchid	Endangered	Oct-Nov	Surveyed outside of flowering period but very identifiable when not flowering by the distinctive leaf that is present May-Sept
<i>Drakaea micrantha</i>	Dwarf Hammer Orchid	Endangered	Sept-Oct	Surveyed in flowering period and identifiable by veined leaf present from when not flowering
<i>Grevillea maccutcheonii</i>	McCutcheon's Grevillea	Endangered	Varied	Identifiable when not flowering
<i>Lepidosperma rostratum</i>	Beaked Lepidosperma	Endangered	May-June	Surveyed outside of flowering period but identifiable when not flowering by curcular, deeply ribbed stems
<i>Thelymitra dedmaniarum</i> (listed as <i>Thelymitra manginii</i>)	Cinnamon Sun-orchid	Endangered	Oct-Nov	Surveyed outside of flowering period but identifiable when not flowering by large green/yellow leaf
<i>Thelymitra stellata</i>	Star Sun-orchid	Endangered	Late Sept-Nov	Surveyed outside of flowering period but identifiable when not flowering by large lilly-like leaf

The timing was in the flowering season for most of the species identified in the database searches and those that were outside of the flowering period would still be recognisable. Therefore, the timing of the survey was suitable.

The timing of the survey was in the peak flowering period for the Grand Spider Orchid (*Caladenia huegelii*) in 2016 as indicated by the monitoring of the reference site by PGV Environmental (Attachment 3)

3.2 Banksia Woodlands on the Swan Coastal Plain TEC

The Banksia woodland on the site was assessed in accordance with the DotEE diagnostic parameters in the conservation advice in four steps as follows:

- Step 1: use the key diagnostic characteristics to determine if the ecological community is present
- Step 2: determine the condition of the patch
- Step 3: consider if the patch meets a minimum size threshold
- Step 4: the surrounding context

The examination of the site in the context of the diagnostics was used to determine if the vegetation in the bushland area is representative of the Banksia Woodlands on the Swan Coastal Plain TEC.

4 Results

4.1 Targeted Search for Flora Species

The targeted search did not identify any of the species in Table 1 as occurring on the site. No other species, not identified in the database searches, listed under the EPBC Act were recorded on the site. There were 51 native species identified on the site that do not have Conservation Significance as listed below:

- *Acacia cochlearis*
- *Acacia saligna*
- *Alexgeorgea nitens*
- *Allocasuarina humilis*
- *Astroloma pallidum*
- *Banksia attenuata*
- *Banksia menziesii*
- *Bossiaea eriocarpa*
- *Burchardia congesta*
- *Calectasia narragara*
- *Calytrix flavescens*
- *Chamaescilla corymbosa*
- *Conostephium preissii*
- *Conostylis aurea*
- *Conostylis setosa*
- *Corynotheca micrantha*
- *Dampiera linearis*
- *Dasygordon bromeliifolius*
- *Daviesia divaricata*
- *Daviesia nudiflora*
- *Daviesia triflora*
- *Desmocladus flexuosa*
- *Dianella revoluta* var *divaricata*
- *Drosera erythrorhiza*
- *Drosera menziesii* subsp *penicillaris*
- *Eremaea pauciflora*
- *Eucalyptus marginata*
- *Gompholobium tomentosum*
- *Hardenbergia comptoniana*
- *Hemiandra pungens*
- *Hibbertia huegelii*
- *Hibbertia hypericoides*
- *Hibbertia racemosa*
- *Hypocalymma robustum*
- *Hypolaena exsulca*
- *Lepidosperma leptostachyum*
- *Leucopogon propinquus*
- *Lyginia barbata*

- *Macrozamia riedlei*
- *Mesomelaena pseudostygia*
- *Patersonia occidentalis*
- *Persoonia saccata*
- *Petrophile linearis*
- *Philotheca spicata*
- *Pyrorchis nigricans*
- *Ricinocarpos glaucus*
- *Scaevola paludosa*
- *Senecio pinnatifolius var. maritimus*
- *Stirlingia latifolia*
- *Thysanotus ?thyrsoides*
- *Xanthorrhoea preissii*

Weed species recorded on the site were:

- *Arctotheca calendula*
- *Avena fatua*
- *Briza maxima*
- *Bromus diandrus*
- *Ehrharta longiflora*
- *Eragrostis curvula*
- *Gladiolus caryophyllaceus*
- *Lotus subbiflorus*
- *Lysimachia arvensis*
- *Oxalis pes-caprae*
- *Parentucellia viscosa*
- *Romulea rosea*
- *Sagina apetala*
- *Sonchus oleraceus*
- *Trifolium campestre*

4.2 Banksia Woodlands on the Swan Coastal Plain TEC

The results of the Banksia Woodland TEC assessment are outlined below.

Step 1: use the key diagnostic characteristics to determine if the ecological community is present

The vegetation in the bushland, described as *Banksia attenuata/B. menziesii/Eucalyptus marginata* Low Open Woodland over a *Xanthorrhoea preissii* Open Heath, contains the Banksia species typical to the TEC. The inferred Floristic Community Type (FCT) for the vegetation was FCT 23a ‘Central *Banksia attenuata* – *Banksia menziesii* Woodlands’ which, according to the conservation advice, has relationship to the TEC.

Step 2: determine the condition of the patch

The bushland was considered to be in Good to Very Good condition and therefore as per Table 3 of the conservation advice is considered to potentially be TEC. Given the level of diversity on the site the bushland will be classified as being in Very Good Condition for the remaining two steps of the analysis.

Step 3: consider if the patch meets a minimum size threshold

The bushland area is a discrete parcel and is not part of a larger area. The entire bushland is approximately 0.6ha in size and therefore is less than the threshold for 1ha Very good vegetation.

Step 4: the surrounding context

The bushland is not part of a larger vegetated area. The bushland contains several tracks and disturbed areas, however as per the conservation advice these were included in the area calculation of the site.

Diagnosis

In accordance with the conservation guidelines Step 1 and 2 indicated that the bushland may represent the TEC, however the size of the bushland is less than the thresholds outlined in Step 3. Therefore, the bushland area cannot be considered to be part of the Banksia Woodlands on the Swan Coastal Plain TEC.

5 Conclusion

The targeted search did not identify any conservation significant flora species listed under the EPBC Act occurring on the site. Therefore, the proposed residential development will not impact on any populations of conservation significant flora species.

The bushland area is not considered to be part of the *Banksia Woodlands on the Swan Coastal Plain* TEC in accordance with the *Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act)* (*s 266B*) *Approved Conservation Advice (incorporating listing advice) for the Banksia Woodlands of the Swan Coastal Plain ecological community*.

Caveat

The information presented in this report has been provided by a range of data sources as acknowledged at the end of the report.

This report is designed to assist in identifying the locations of places which may be relevant in determining obligations under the Environment Protection and Biodiversity Conservation Act 1999. It holds mapped locations of World and National Heritage properties, Wetlands of International and National Importance, Commonwealth and State/Territory reserves, listed threatened, migratory and marine species and listed threatened ecological communities. Mapping of Commonwealth land is not complete at this stage. Maps have been collated from a range of sources at various resolutions.

Not all species listed under the EPBC Act have been mapped (see below) and therefore a report is a general guide only. Where available data supports mapping, the type of presence that can be determined from the data is indicated in general terms. People using this information in making a referral may need to consider the qualifications below and may need to seek and consider other information sources.

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

For species where the distributions are well known, maps are digitised from sources such as recovery plans and detailed habitat studies. Where appropriate, core breeding, foraging and roosting areas are indicated under 'type of presence'. For species whose distributions are less well known, point locations are collated from government wildlife authorities, museums, and non-government organisations; bioclimatic distribution models are generated and these validated by experts. In some cases, the distribution maps are based solely on expert knowledge.

Only selected species covered by the following provisions of the EPBC Act have been mapped:

- migratory and
- marine

The following species and ecological communities have not been mapped and do not appear in reports produced from this database:

- threatened species listed as extinct or considered as vagrants
- some species and ecological communities that have only recently been listed
- some terrestrial species that overfly the Commonwealth marine area
- migratory species that are very widespread, vagrant, or only occur in small numbers

The following groups have been mapped, but may not cover the complete distribution of the species:

- non-threatened seabirds which have only been mapped for recorded breeding sites
- seals which have only been mapped for breeding sites near the Australian continent

Such breeding sites may be important for the protection of the Commonwealth Marine environment.

Conservation Codes

- Rare or likely to become extinct
- X - Presumed extinct
- IA - Protected under international agreement
- S - Other specially protected fauna
- 1 - Priority 1
- 2 - Priority 2
- 3 - Priority 3
- 4 - Priority 4
- 5 - Priority 5

¹ For NatureMap's purposes, species flagged as endemic are those whose records are wholly contained within the search area. Note that only those records complying with the search criterion are included in the calculation. For example, if you limit records to those from a specific datasource, only records from that datasource are used to determine if a species is restricted to the query area.

File Note

Caladenia huegelii – Reference Location – Banjup

To verify the timing for targeted surveys for *Caladenia huegelii* a reference site in Banjup in the City of Armadale was inspected in regular intervals during Spring 2016 by PGV Environmental to ensure the timing of the surveys were appropriate for the identification of this species.

17 July 2016

Leaves on 90% of the known plants in the area were present

**18 August 2016**

Two leaves had been damaged by grazing, presumably rabbits. The remainder of the plants that were recorded on the site as emerging with leaves were in bud with most in the early stages with buds emerging at the base and two in full bud.

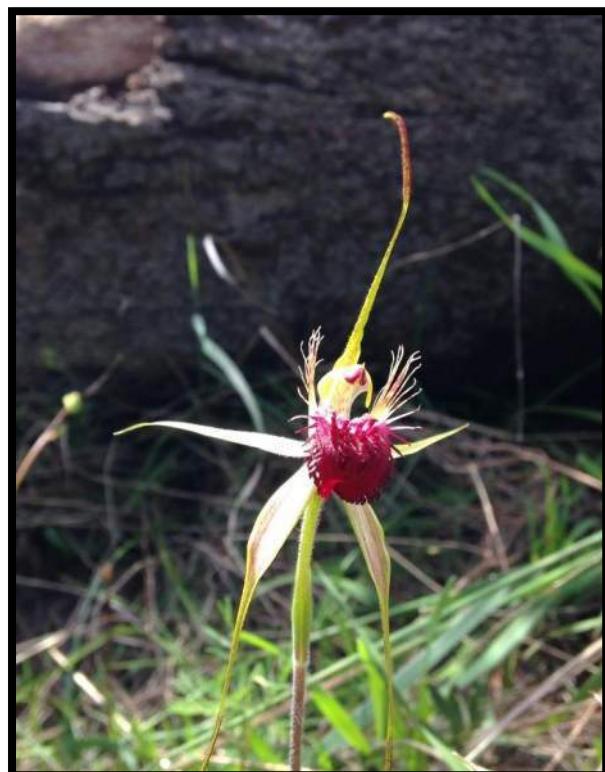

6 September 2016

Most individuals were still in bud with approximately 20% in flower

12 September 2016

All individuals that produced a flower spike are in full flower except one which has a prominent bud.

22 September 2016

All orchids that produced spikes are in full flower and additional individuals were recorded in an area just to the west.

10 October 2016

Most flowers present but some starting to curl – considered to be the end of the peak period.
